### QUESTION 1

What are three methods to isolate tenants in a multi-tenant environment? (Choose three)

- A. Create separate server pools.
- B. Define Role Based Access Control.
- C. Create separate VLAN(s) for each tenant.
- D. Disable specific ports for insecure services.
- E. Separate zoning for storage units.

Correct Answer: BCE

---

### QUESTION 2

While managing a Vblock® System 340, you monitor the system for optimal performance configuration. Which ESXi CPU performance metric should be viewed to confirm expected ESXi CPU behavior?

- A. CPU Active
- B. CPU Usage
- C. CPU Granted
- D. CPU Consumed

Correct Answer: B

---

### QUESTION 3

You are using expandable resource pools in your VMware cluster to ensure each environment is allocated the appropriate resources. There is a resource pool for your development environment that has a reservation of 5 GHz CPU and 12 GB of memory. There is a child resource pool of the development resource pool named Sandbox that has a reservation of 1 GHz CPU and 4 GB of memory. You create four new virtual machines with 4 GB of memory in the Sandbox environment.

In this scenario, which statement is true?

- A. Only one of the new virtual machines will power on.
- B. All new virtual machines will power on.
- C. Only three of the new virtual machines will power on.
- D. No new virtual machines will power on.

Correct Answer: B

---

#### QUESTION 4

You are asked to configure vMotion on a Vblock® System 340. According to VCE best practice, what is required to enable this feature?

- A. Use separate subnets for vMotion source and destination hosts.
- B. Enable jumbo frames for the vMotion network.
- C. Select a dedicated VLAN for the vMotion traffic.
- D. Use the same subnet as AMP management traffic.

Correct Answer: C

---

#### QUESTION 5

You are working on latency problems with a storage pool in your Vblock® System 340. After investigation, you decide that the FAST Cache must be expanded on the VNX.

What is required to accomplish this task?

- A. All additional EFD drives must be in the same storage pool as the existing FAST Cache drives.
- B. A separate FAST VP cache is created and storage pools are migrated to it.
- C. The existing FAST Cache must be deleted and the entire cache re-created.
- D. SP Write Cache must be disabled for all pools using FAST Cache prior to expansion.

Correct Answer: C
