QUESTION 1

VCE has just deployed a Vblock® System in your data center and you want to validate the system's health.

Which two components would you monitor using UCSM to accomplish this task? (Choose two)

- A. Port licensing
- B. Fabric Interconnects
- C. Server blades
- D. Chassis back plane

Correct Answer: BC

QUESTION 2

An application can no longer access its allocated storage on a Vblock® System 340.

According to Cisco MDS troubleshooting guidelines, which action would be used to investigate the problem?

- A. Enable system message logging.
- B. Use Unisphere to view fabric problems.
- C. Determine if the host has ever been able to see VNX storage.
- D. Determine if the host recognizes any LUNs in the VNX storage system.

Correct Answer: D

QUESTION 3

By not deleting their snapshots, a customer filled a data store to 100% capacity preventing other VMs sharing the same data store from starting or restarting. Which vCenter operation would have helped identify this problem?

- A. Use the vCenter VCE Vision™ Intelligent Operations monitoring plugin.
- B. Use the vCenter alarm set to trigger a reporting action once the data store reached capacity.
- C. Use the vCenter thin to thick vmdks to force a static quota.
- D. Use vCenter Orchestrator to create a new data store and migrate when needed.

Correct Answer: B

QUESTION 4

A new Vblock® System 720 customer is interested in managing initiator groups and monitoring virtual provisioning.

Which element manager would you recommend?

- A. VCE Vision™ Intelligent Operations
- B. Unisphere
- C. UCSM
- D. Data Center Network Manager

Correct Answer: B

QUESTION 5

Your VMware administrator is asked to assign more storage to a virtual machine but does not have sufficient capacity available on the existing data stores.

Which three steps would you perform to assign the requested storage? (Choose three)

- A. Create a data LUN on the storage array.
- B. Create a new data storage pool on the storage array.
- C. Assign a data LUN to the ESXi host groups.
- D. Assign a new data storage pool to the ESXi host groups.
- E. Rescan storage and create a new data store.

Correct Answer: ACE
