QUESTION 1

Which of the following voltages is MOST likely to be supplied from a PC power supply unit? (Select TWO).

- A. 1V
- B. 1.7V
- C. 3.3V
- D. 5V
- E. 9V

Correct Answer: CD

Explanation: 3.3 volts and 5V are the common voltage range that a PC power supply unit uses to power computer components.

QUESTION 2

A user states that a network printer, attached to and shared from a co-worker's computer, does not always print the jobs submitted to it. The user adds that it seems to happen at different times throughout the day, but at other times works fine. Which of the following is MOST likely the cause?

- A. The co-worker's computer is hibernating
- B. The user's print drivers are incompatible
- C. The printer has entered power save mode
- D. The submitted jobs are incompatible

Correct Answer: A

The computer might be hibernating. Since the problem occurs certain times throughout the day, the print jobs submitted to it might only be active when the computer is active. If the computer is hibernating, print jobs will not be able to go through the printer.

QUESTION 3

A technician is reviewing the output of an ipconfig command. Which of the following listed IP addresses forwards traffic to another network or subnet?

- A. DHCP server
- B. DNS servers
- C. Subnet mask
- D. Default gateway

Correct Answer: D

QUESTION 4

Which of the following settings, when enabled, is MOST likely to result in an IP address conflict on a local network?

- A. Custom DNS address
- B. QoS enabled
- C. UPnP enabled
- D. Static IP address

Correct Answer: D
