A. Inventory Rule Agent Plug-in

B. Inventory Agent Plug-in

C. Software Update Agent Plug-in

D. Application Metering Agent Plug-in

E. Software Management Solution Agent Plug-in

Correct Answer: BD

QUESTION 2

When reviewing compliance reports for the Microsoft products, the system administrator notices that the data and bulletins have remained unchanged for two weeks. What should the administrator check to address this issue?

A. Revise Software Update task

B. Import Patch Data for Microsoft policy

C. Patch Management Import task

D. Microsoft Compliance Update policy

Correct Answer: B

QUESTION 3

A company has an environment where only some computers have the Symantec Workspace Virtualization (SWV) agent installed. When the system administrator distributes an MSI application through a Managed Delivery policy to all company computers and installs the application into a virtual layer, what will happen to computers without the SWV Agent?

A. The application installation will fail.

B. The SWV agent will automatically be installed; then the application will be installed into a virtual layer.

C. The application will be installed as nonvirtual, but the application will be moved into a virtual layer after the SWV agent is installed.

D. The application will be installed as nonvirtual.

Correct Answer: D

QUESTION 4

Which information is gathered by a Targeted Software Inventory?

A. installed software details from a computer in a specific part of the network

B. installed software details for previously deployed software

C. installed software details for a specific software resource

D. installed software details from computers that used the Software Portal

Correct Answer: C

QUESTION 5

A healthcare company has several smaller outlying locations with very limited bandwidth to corporate headquarters. Maintenance of computers in these locations is proving problematic, especially operating system upgrades and deployment. They would like to completely automate the operating system distribution, installation, and configuration for connected PCs in these locations with minimal impact on the WAN. They have selected a Site Server for each location. What must they do to enable re-imaging of managed computers to occur locally in each remote location?

A. install Task and Package services on the designated site server; enable the Deployment Site server policy, Deployment Plug-in policy, andAutomation Folders policy

B. enable Deployment Site server and Deployment plug-in policies; establish a remote Deployment portal on the site server; configure PackageServer image replication

C. install Package and Deployment site services on the designated site server; enable PXE Configuration policies; enable the Deployment TaskHandler policy

D. enable Deployment PXE service components on the designated site server; create a preboot configuration supporting PXE; enable theDeployment Plug-in policy

Correct Answer: A
