QUESTION 1

Which object can an administrator add to an organizational group?

- A. User
- B. Report
- C. Policy
- D. Data class

Correct Answer: A

Organization is added as a member of the Organization Management role group. This account can then add other members to the role group as needed.

QUESTION 2

A large organization wants to stagger the installation of software updates with computers in different organizational groups by installing the updates on different days.

How can an administrator accomplish this without continually creating separate software update policies that target the different organizational groups?

- A. Configure Site Management settings so that each organizational group downloads the software update installation files from a different package server
- B. Create clones of the Default Software Update Plug-in Policy and modify the target in each policy
- C. Configure an automation policy that periodically disables the Software Update Plug-in by organizational group
- D. Create clones of the Windows Patch Remediation Settings and modify the target in each policy

Correct Answer: A

QUESTION 3

Which installation package should an administrator use to install the Cloud-enabled Management services on an Internet-facing server?

- A. Internet Gateway Installation package
- B. Symantec Installation Manager package
- C. Task Server Agent plug-in package
- D. Symantec Management Agent package

Correct Answer: A

QUESTION 4

A company has an environment where only some computers have the Symantec Workspace Virtualization (SWV) agent installed.

What happens to computers without the SWV Agent when an administrator distributes an MSI application through a Managed Delivery policy to all company computers and installs the application into a virtual layer?

- A. The application installation fails
- B. The application is installed as non-virtual, but the application is moved into a virtual layer after the SWV agent is installed
- C. The SWV agent is automatically installed; then the application is installed into a virtual layer
- D. The application is installed as non-virtual

Correct Answer: A

QUESTION 5

An administrator notices a large amount of task traffic within the environment. The administrator decides to implement secondary site servers to alleviate task traffic congestion. There are three sites that each have 5,000 managed computers. The administrator has two servers and three old desktops each running Windows Server 2012 to use as site servers.

What should the administrator do to accommodate the different hardware types?

- A. Configure sites and subnets to instruct the managed computers to leverage a specific Task Server
- B. Set the desktop site servers as unconstrained while leaving the server-based site servers as constrained
- C. Create a task settings policy to limit the number of clients the desktop site servers can accommodate
- D. Set the server-based site servers as unconstrained, while leaving the desktop site servers as constrained

Correct Answer: A
