QUESTION 1

What is a good way to know whether all internal IP addresses seen by the Cascade Profiler have been grouped in a particular group type?

- A. Run Automatic grouping for all group types.
- B. Configure an Undefined group type with definition 0.0.0.0/0; confirm there are no entries when you '\\view members\\' of this '\\Undefined\\' group\\'.
- C. There is no way to do this and successfully capture all the IP addresses.
- D. Configure an Undefined group type with definition 0.0.0.0/32.
- E. Run a report by hosts and look for undefined groups.

Correct Answer: B

QUESTION 2

In Cascade, how are custom Layer 7 applications configured?

- A. On the Sensor, you must define either a hex string, text string, or URL.
- B. On the Profiler, you must define either a hex string, text string, or URL.
- C. On the Gateway, you must define either a hex string, text string, or URL.
- D. You have to first enable security analytics on the Profiler, then you define either a string or URL on either the Profiler or the Sensor.
- E. Custom applications cannot be defined, but the Sensor can identify most off-the-shelf programs.

Correct Answer: B

QUESTION 3

What options are available on Cascade Profiler for triggering an alert when QoS tagging for a flow has changed along the way from remote site to data center location?

- A. Define an application availability analytic for the application being monitored
- B. Define an interface-based user-defined policy
- C. Enable the Bandwidth Surge security policy
- D. Run a report that identifies any traffic flows that have had two different QoS taggings applied
- E. Cascade does not have the capability to trigger such an alert.

Correct Answer: E

QUESTION 4

For a worm security event to be triggered on Cascade Profiler, what event must have occurred first?

- A. Host Scan
- B. Port Scan
- C. Link Availability
- D. Suspicious Connection
- E. There is no event that triggers before a worm event.

Correct Answer: A

QUESTION 5

The Cascade Profiler authenticates users before logging them in. What are the possible choices for authentication? (Select 3)

- A. Cascade Profiler local database
- B. User account specifies authentication by RADIUS
- C. TACACS
- D. RADIUS server to authenticate the user

Correct Answer: ABD
