An administrator receives the error in the attached screenshot when attempting to add a cloud account. What is a possible cause of this error?

A. The hostname uses a URL instead of IP address/FQDN.

B. A cloud account exists with the same name.

C. The username and password are incorrect.

D. There is an invalid certificate for the vCenter.

Correct Answer: C

QUESTION 2

An administrator is trying to synchronize a new blueprint into the App-Dev project. The administrator copies the blueprint code directly from Cloud Assembly into a text file and uploads it into the Github repository so that it can be synchronized to the App-Dev project.

When the administrator clicks `Synch Repos\\', a new blueprint does not appear.

Which step must the administrator take to allow it to synchronize from the Github repository?

A. Clone the blueprint.

B. Release the blueprint.

C. Upload the blueprint.

D. Add the name and version to the blueprint YAML code.

Correct Answer: D

QUESTION 3

Which TCP/IP port must be open and allowed on the firewall to access the vRealize Automation user interface?

A. 8008

B. 443

C. 2380

D. 6443

Correct Answer: B

QUESTION 4

An administrator creates a content source to import three Cloud Assembly blueprints in to Service Broker. After some time, he is tasked with deleting the content source.

What would happen if and when this content source is deleted?

A. All three blueprints are deleted from Service Broker and Cloud Assembly.

B. Only the content source is deleted but the blueprints remain intact in Service Broker.

C. All three blueprints are deleted from Service Broker.

D. Once created, a content source cannot be deleted.

Correct Answer: B

QUESTION 5

Refer to the exhibit.

The App-Dev team requests that IT provide them with a multi-cloud catalog where they can use self-service to deploy their own development workloads without needing to raise a work order with the IT team. The company security policy requires that users be granted the least privileges necessary to fulfill their role.

Within vRealize Automation (vRA), the administrator successfully updates the existing directory configuration to include the App-Dev-User group and then uses the Enterprise Groups feature to assign both organization and service roles to the App-Dev team. The administrator then logs into vRA, creates a dedicated App-Dev project and adds the appropriate development cloud zones, synchronizes the standardized blueprints from GitHub and releases them to Service Broker and configures the content sources so they show up in the service catalog. The administrator checks and is able to see the blueprints, and requests that the App-Dev team leader log in and access the catalog. The App-Dev team leader replies with the attached screenshot and requests more information about where to find the service catalog.

Which two actions should the administrator take within Identity and Access Management to resolve the access issue for the App-Dev team? (Choose two.)

A. Change the assigned organization role to Member.

B. Change the assigned organization role to Owner.

C. Assign the Service Broker Administrator service role.

D. Assign the Service Broker User service role.

E. Assign the Cloud Assembly User service role.

Correct Answer: AD
