https://techzone.vmware.com/blog/what-oauth-learning-basics The following authentication mechanisms are available: AD credentials, RSA SecurID , RADIUS , Smart cards , Security Assertion Markup LangUnified Access Gateway (SAML)

QUESTION 2

A user is assigned two writable volumes, one created using a Windows 7 and another using a Windows 10 machine. Which of the following scenarios will happen when the user logs on to a Windows 10 VM?

A. Both writable volumes gets attached to the Windows 10 machine.

B. Since a machine can have only one Writable Volume attached to it at a given point in time, and the user has two assigned writable volumes, none of them gets attached.

C. Since a machine can have only one Writable Volume attached to it at a given point in time, the user cannot have two assigned writable volumes.

D. The writable volume created using a using Windows 10 machine gets attached.

Correct Answer: D

A user can have more than one Writable Volume attached at the same time if the volume is OS-specific, or created for a computer with a specific prefix. For example, suppose that you create a Writable Volume for each of the following: A Windows 7 machine A Windows 10 machine A computer with Win2012-dev prefix to its name A computer with Win2012-test prefix to its name Then, when the user logs in to these different machines at the same time, each Writable Volume that is assigned to the specific machine is attached to the user at the same time.
