QUESTION 1

Which storage feature always requires the use of third-party software on ESXi?

- A. Hardware Acceleration for NAS devices
- B. VVOL
- C. Hardware Acceleration for Block Devices
- D. VM Storage Policies

Correct Answer: A

With NAS storage devices, the hardware acceleration integration is implemented through vendor-specific NAS plug-ins. These plug-ins are typically created by vendors and are distributed as VIB packages through a website. No claim rules are required for the NAS plug-ins to function.

Several tools for installing and upgrading VIB packages are available. They include the esxcli commands and vSphere Update Manager.

When working with VM-VM DRS rules (affinity/anti-affinity), which statement is correct?

- A. DRS gives higher priority to preventing violations of affinity rules than violations of anti- affinity rules.

- C. DRS does not allow both affinity and anti-affinity rules to be enabled at the same time within a cluster.
- D. DRS gives higher priority to preventing violations of anti-affinity rules than violations of affinity rules.

When two VM-VM affinity rules conflict, the older one takes precedence and the newer rule is disabled. DRS only tries to satisfy enabled rules and disabled rules are ignored. DRS gives higher precedence to preventing violations of anti-affinity rules than violations of affinity rules.
