QUESTION 1

Refer to the exhibit.

```
public class ClientServiceImpl implements ClientService{  
    @Transactional(propagation=Propagation.REQUIRED)  
    public void update() {  
        update2();  
    }  
    @Transactional(propagation=Propagation.REQUIRES_NEW)  
    public void update2() {  
    }  
}
```

Assume that the application is using Spring transaction management which uses Spring AOP internally.

Choose the statement that describes what is happening when the update1 method is called? (Choose the best answer.)

- A. There are 2 transactions because REQUIRES_NEW always runs in a new transaction.
- B. An exception is thrown as another transaction cannot be started within an existing transaction.
- C. There is only one transaction because REQUIRES_NEW will use an active transaction if one already exists.
