QUESTION 1

Drag and drop the statements about SPAN source and destination ports from the left onto the correct port types on the right.

Select and Place:

	Source Port
Its original configuration is overwritten by the SPAN configuration.	
It can be monitored as a bundled logical port or as individual physical ports.	
It can be trunk or an access port.	
It acts as the monitoring port.	Destination Port
It is not supported as part of a VLAN.	
Multiple VLANs can be included in a single session.	

Correct Answer:

Source Port

It acts as the monitoring port.
It can be monitored as a bundled logical port or as individual physical ports.
Multiple VLANs can be included in a single session.

Destination Port

It can be trunk or an access port.
It is not supported as part of a VLAN.
Its original configuration is overwritten by the SPAN configuration.

QUESTION 2

Which command set the interval LLDP send updates to its neighbors?

A. LLDP tlv-select

B. LLDP Timer

C. LLDP Transmit

D. http://certbus.com

Correct Answer: B

QUESTION 3

Why the network administration can want to to disable MAC address learning on the router?

A. To free up space in MAC address table.

B. To use space in MAC address table

C. To wipe space in MAC address table.

D. There was a security violation.

Correct Answer: A

QUESTION 4

Which two statements about PortFast are true? (Choose two.)

A. It forces the port to skip all spanning-tree states.

B. The port is error-disabled if it attempts to move into the listening or learning states.

C. It allows the port to skip the learning state only

D. The port moves immediately to the forwarding state when a device is connected.

E. It is most appropriate for ports that provide connectivity to individual workstations or servers

Correct Answer: DE

QUESTION 5

When IP Source Guard with source IP filtering is enabled on an interface, which feature must be enabled on the access VLAN for that interface?

A. DHCP snooping

B. storm control

C. spanning-tree portfast

D. private VLAN

Correct Answer: A

IP Source Guard Configuration Guidelines

You can configure static IP bindings only on nonrouted ports. If you enter the ip source binding mac- address vlan vlan-id ip-address interface interface-id global configuration command on a routed interface, this error message appears:

Static IP source binding can only be configured on switch port.

When IP source guard with source IP filtering is enabled on an interface, DHCP snooping must be enabled on the access VLAN for that interface.

If you are enabling IP source guard on a trunk interface with multiple VLANs and DHCP snooping is enabled on all the VLANs, the source IP address filter is applied on all the VLANs.

You can enable this feature when 802.1x port-based authentication is enabled. Reference: http://www.cisco.com/c/en/us/td/docs/switches/lan/catalyst2960x/ software/15- 0_2_EX/security/configuration_guide/b_sec_152ex_2960-x_cg/
