QUESTION 1

A question about EtherChannel misconfig.

A. spanning-tree etherchannel guard misconfig

B. www.certbus.com

C. www.certbus.com

D. www.certbus.com

Correct Answer: A

QUESTION 2

Which private VLAN can have only one VLAN and be a secondary VLAN that carries unidirectional traffic upstream from the hosts toward the promiscuous ports and the gateway?

A. isolated VLAN

B. primary VLAN

C. community VLAN

D. promiscuous VLAN

Correct Answer: A

Understanding Primary, Isolated, and Community Private VLANs Primary VLANs and the two types of secondary VLANs (isolated and community) have these characteristics:

Primary VLAN-- The primary VLAN carries traffic from the promiscuous ports to the host ports, both isolated and community, and to other promiscuous ports.

Isolated VLAN --An isolated VLAN is a secondary VLAN that carries unidirectional traffic upstream from the hosts toward the promiscuous ports. You can configure multiple isolated VLANs in a private VLAN domain; all the traffic remains

isolated within each one. Each isolated VLAN can have several isolated ports, and the traffic from each isolated port also remains completely separate.

Community VLAN--A community VLAN is a secondary VLAN that carries upstream traffic from the community ports to the promiscuous port and to other host ports in the same community. You can configure multiple community VLANs in a

private VLAN domain. The ports within one community can communicate, but these ports cannot communicate with ports in any other community or isolated VLAN in the private VLAN.

QUESTION 3

Which command configures an interface to accept LLDP packets without enabling the interface to send the packet?

A. lldp transmit

B. lldp tlv-select

C. lldp receive

D. lldp run

Correct Answer: B

QUESTION 4

Which command disables STP on multiple interfaces?

A. no spanning-tree vlan 10

B. no spanning-tree pvst

C. no spanning-tree mst

D. http://certbus.com

Correct Answer: A

QUESTION 5

Which two statements about GLBP are true? (Choose two.)

A. The AVF responds to ARP request for the virtual IP address.

B. The LAN client traffic is handled by the active AVF only.

C. The AVG assigns virtual MAC addresses to GLBP group members.

D. The AVF assigns virtual MAC addresses to GLBP group members.

E. The AVG responds to ARP requests for the virtual IP address.

Correct Answer: CE
