-  **800,000+** Satisfied Customers

QUESTION 1

You plan to configure authentication for OSPF. In which configuration mode should you configure OSPF authentication to use a specific key chain?

- A. router ospf
- B. global
- C. vPC
- D. interface

Correct Answer: D

Reference: http://www.cisco.com/c/en/us/td/docs/switches/datacenter/sw/4_2/nx-os/unicast/configuration/guide/l3_cli_nxos/l3_ospf.html

QUESTION 2

How does addition of bandwidth between spine and leaf switches in a FabricPath architecture get utilized?

- A. Links between the same set of switches are automatically added to a port channel.
- B. Adding additional bandwidth is handled dynamically using the 802.1AX protocol.
- C. Traffic is load shared automatically across the available paths to the destination.
- D. FabricPath uses hardware bonding of physical interfaces to form higher-speed links.

Correct Answer: C

QUESTION 3

Which information does the show fcns database command display?

- A. nWWN
- B. FCID
- C. port name
- D. interface

Correct Answer: B

Reference: https://www.cisco.com/en/US/docs/storage/san_switches/mds9000/sw/rel_1_x/1_0_2/san-os/configuration/guide/MgngStorDevc.html

QUESTION 4

Which two statements about SAN zoning on Cisco Nexus switches are true? (Choose two.)

- A. Unlike configured zones, default zone information is not distributed to the other switches in the fabric.
- B. Traffic can either be permitted or denied among members of the default zone. This information is not distributed to all switches. It must be configured in each switch.
- C. The settings for default zone configurations cannot be changed.
- D. To activate a zone set, you must copy the running configuration to the startup configuration after the zone set is configured.
- E. Soft zoning restrictions will not prevent a source device from accessing a device outside its zone, if the source knows the Fibre Channel ID of the destination.
- F. Hard zoning is enforced by the hardware on each FLOGI sent by an N Port.

Correct Answer: BE

Each member of a fabric (in effect a device attached to an Nx port) can belong to any zone. If a member is not part of any active zone, it is considered to be part of the default zone. Therefore, if no zone set is active in the fabric, all devices are considered to be in the default zone. Even though a member can belong to multiple zones, a member that is part of the default zone cannot be part of any other zone. The switch determines whether a port is a member of the default zone when the attached port comes up. Unlike configured zones, default zone information is not distributed to the other switches in the fabric Traffic can either be permitted or denied among members of the default zone. This information is not distributed to all switches; it must be configured in each switch. http://www.cisco.com/c/en/us/td/docs/switches/datacenter/mds9000/sw/5_2/configuration/guides/fabric/DCNM-SAN/fm_fabric/zone.html

QUESTION 5

On a Cisco Nexus 5500 Series switch, what is the result of running the (config-if)# switchport mode vntag command?

- A. allows the connected FEX to assign each VM a dedicated vEthernet interface on the host switch
- B. allows the connected server to assign each VM a dedicated vEthernet interface on the host switch
- C. allows the connected server to assign each VM a dedicated Ethernet interface on the host switch
- D. allows the connected FEX to assign each VM a dedicated Ethernet interface on the host switch

Correct Answer: A
