- A. contiguous chain of Level 2 capable routers
- B. contiguous chain of Level1/Level 2 capable routers
- C. set of Level 2 configured interfaces
- D. contiguous Level 1 capable routers
- E. set of Level 1 configured interfaces

Correct Answer: AB

https://www.cisco.com/en/US/products/ps6599/products_white_paper09186a00800a3e6f.s.html "Backbone IS-IS does not have a backbone area like the OSPF area 0. The IS-IS backbone is a contiguous collection of Level 2-capable routers,

each of which can be in a different area"

<http://www.ciscopress.com/articles/article.asp?p=26850andseqNum=3>

"In most designs with routing hierarchy, the Level 2 routers are also Level 1 routers by virtue of their identification with a certain area. Therefore, in IS-IS, a router can function as Level 1-only or Level 2-only and possibly as both Level 1 and

Level 2 (Level 1-2). Level 1-2 routers act as border routers to their respective areas, providing connectivity to other areas. The Level 2 backbone is essentially a virtual IS-IS area consisting of routers engaged in Level 2 routing"
