QUESTION 1

A wireless engineer wants to view how many WIPS alerts have been detected in Cisco Prime. Which tab does the engineer select in the wireless dashboard?

- A. Security
- B. Context Aware
- C. Mesh
- D. CleanAir

Correct Answer: A

Security Index, including the top security issues Adaptive WIPS Rogue classification graph Rogue containment graph Attacks detected Malicious, unclassified, friendly, and custom rogue APs CleanAir security Adhoc rogues Security https://www.cisco.com/c/en/us/td/docs/net_mgmt/prime/infrastructure/3-1/user/guide/pi_ug/view-dash.html

QUESTION 2

When a supplicant and AAA server are configured to use PEAP, which mechanism is used by the client to authenticate the AAA server in Phase One?

- A. PMK
- B. shared secret keys
- C. digital certificate
- D. PAC

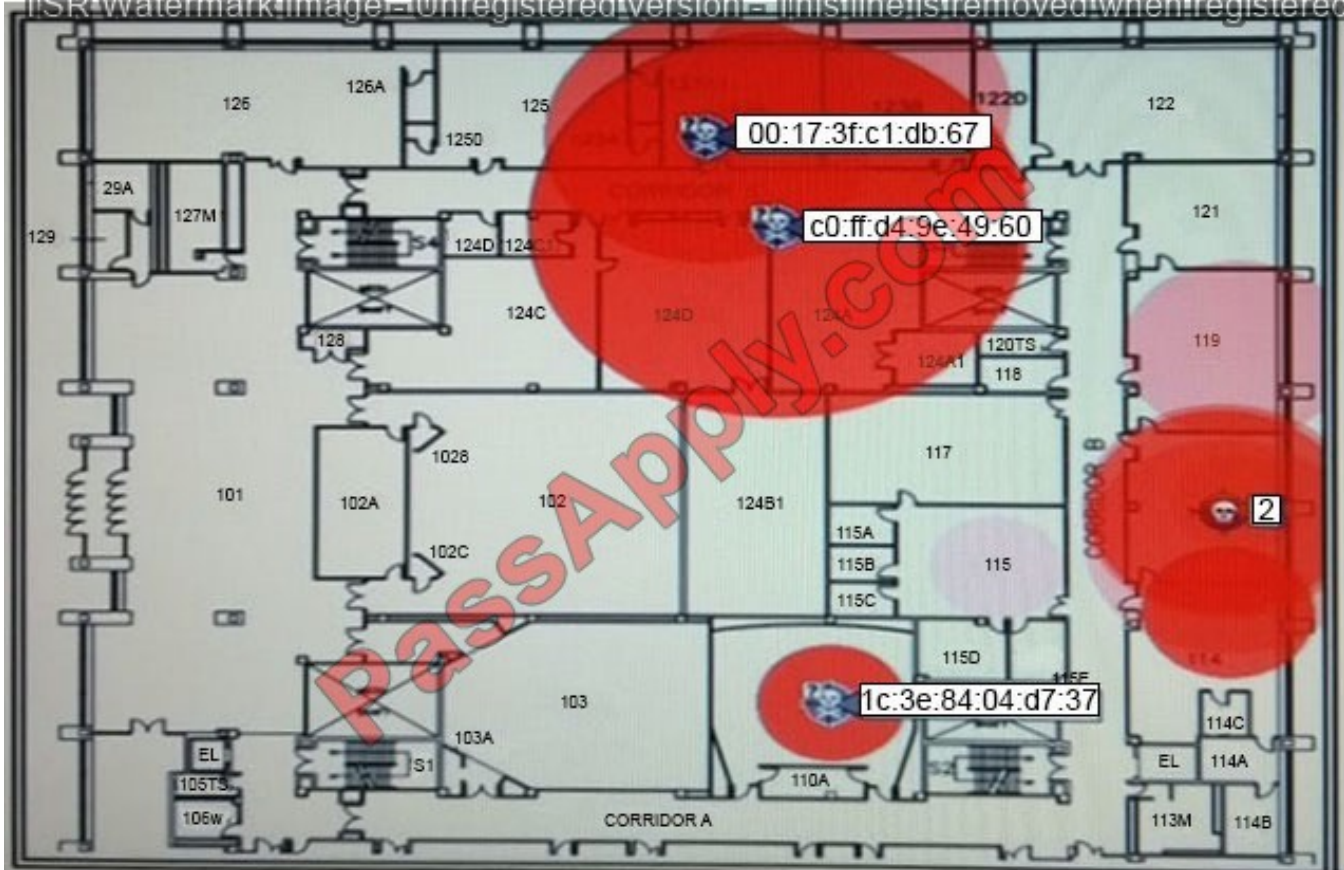

Correct Answer: C

QUESTION 3

Refer to the exhibit. What do the red circles represent in the exhibit?

TSR Watermark Image - Unregistered version - This line is removed when registered

- A. detected interferers
- B. WLPs attacker
- C. RSSI cutoff
- D. zones of impact

Correct Answer: B

QUESTION 4

A WLAN on the WLC is configured for web authentication as the Layer 3 Security policy with the web-auth type External. Which two elements are required as part of the configuration? (Choose two.)

- A. WLAN being not present in the default AP group
- B. IP address assigned to the virtual interface on the WLC, which is not routable
- C. preauth ACL to allow access to the external web server
- D. HTTPS redirection enabled
- E. web-auth secure web option enabled

Correct Answer: CE

QUESTION 5

When a wireless client uses WPA2 AES, which keys are created at the end of the four-way handshake process between the client and the access point?

- A. AES key, TKIP key, WEP key
- B. AES key, WPA2 key, PMK
- C. KCK, KEK, TK
- D. KCK, KEK, MIC key

Correct Answer: A

Explanation: When WPA-PSK or WPA2-PSK is performed via Temporal Key Integrity Protocol (TKIP) or Advanced Encryption Standard (AES) for the encryption, the client must go through the process known as the WPA 4-Way handshake for both the initial association and also when roaming. As previously explained, this is basically the key management process used in order for WPA/WPA2 to derive the encryption keys. However, when PSK is performed, it is also used in order to verify that the client has a valid Pre-Shared Key to join the WLAN.
