QUESTION 3

Which tool streamlines the development of network applications?

- A. Java Runtime Engine
- B. software development kit
- C. command-line interface
- D. General Public License
- E. package management system

Correct Answer: B

Streamlines software development and integration effort required for advanced imaging and vision applications. Imagine software developers could run their entire imaging / vision project on the (more familiar) CPU environment, while the code automatically gets translated and optimized on the (more power-efficient) DSP - With the CEVA Application Developer Kit (ADK) it is now possible.

QUESTION 5

Cisco APIC-EM is used to add network-wide making policy for Cisco Spark users who are connected to a Cisco Catalyst 6500 device. After this change, wireless users complain about a delay in other applications. What is a possible reason for this delay?

- A. The DSCP-to-CoS mappings were configured incorrectly
- B. The policy was also deployed to the WLAN controller and overrode the policies of other applications
- C. You cannot automate policy for more than one real-time application at a time
- D. Policy automation cannot be deployed for wireless and wired elements at the same time

Correct Answer: D

This value gets plumbed into the policy created on the wireless controller. Based on the user authentication, a configured policy and profile are applied to a specific user on the same WLAN.
