QUESTION 1

DRAG DROP

Drag and drop the operations from the left into the correct order on the right when using CI/CD, assuming that there are no failures or conflicts.

Select and Place:

Answer Area

generating deliverables	step 1
starting of rolling deployment	step 2
developer commits	step 3
integration testing	step 4
unit testing	step 5
merging of commit into mainline	step 6

Correct Answer:

Answer Area

	generating deliverables
	merging of commit into mainline
	starting of rolling deployment
	unit testing
	integration testing
	developer commits

QUESTION 2

Which Kubernetes object ensures that each node is limited to running no more than one pod?

- A. UniCast
- B. Deployment
- C. DaemonSet
- D. ReplicaSet

Correct Answer: C

QUESTION 3

What is a benefit of Infrastructure as Code for the cloud?

- A. It groups system downtime across the infrastructure
- B. It enables the user to automate deployments
- C. It does not require configuration.
- D. It is a cost effective solution for services

Correct Answer: B

QUESTION 4

What are two advantages of using Configuration Management Tools? (Choose two.)

- A. reduction in policy violations caused by human errors
- B. reduction in administration costs
- C. reduction in network changes already performed automatically
- D. reduction of on-premises networking equipment
- E. reduction in networking team skills

Correct Answer: AB

Configuration Management Tools allow for automated configuration of networking equipment, which helps to reduce human errors and the time and money needed to manage and configure the equipment. For example, Cisco Configuration Professional (CCP) is a configuration management tool that provides automated configuration, validation, and troubleshooting of network infrastructure devices. CCP enables administrators to configure and deploy network changes quickly and efficiently, while also reducing the costs associated with manual configuration and troubleshooting.

QUESTION 5

A new banking application is being developed as the main currency exchange resource for all the customers on a global scale. The application must comply with the security based on the deployed region. Therefore, the CI/CD pipeline must be created with the highest security possible.

Which approach accomplishes this goal?

- A. Give the accounts used in the CI/CD pipeline full administrative rights to all applications
- B. Use the same passwords across the entire CI/CD pipeline
- C. Ensure that secrets are not inadvertently passed on during builds for pull requests via CI/CD pipeline
- D. Never use one-time passwords in CI/CD pipeline

Correct Answer: C
