QUESTION 1

Session Manager has a routing policy that routes calls made to any number beginning with '\\100\\' to SIP Entity X. However, '\\sip.-1001avaya.com\\' is the SIP communication profile address of user Y. User Y is not currently registered (signed in) with Session Manager. What will happen if Session Manager receives a call addressed to '\\sip.-1001avaya.com\\' and why?

- A. It depends on the time ranges of the policy. If the call is placed inside a defined time range for the policy, the call will be routed to destination X. If not, then Session Manager will attempt to route the call to user Y. Since Y is not registered, the call will timeout, and the call will fail.
- B. Since user Y is not currently registered, the call will be handled by the routing policy. If the call is placed during a time range specified by the policy, then the call will be routed to destination
- X. If not, then the call will fail.
- C. Since the destination URI matches a communication profile SIP handle, Session Manager will not use the routing policy in handling the call. The call will fail since user Y is not currently registered.
- D. Since the destination URI matches a routing policy dial pattern, Session Manager will give no consideration to the user Y registration status. If the call is made during a time range for the policy, the policy will be applied and the call will be routed to destination X. If not, then the original URI of '\\sip.-1001avaya.com\\' will be used as the destination to which Session Manager will route the call.

Correct Answer: C

QUESTION 2

Which parameter is required when installing the System Manager 6.1 (SMGR) template?

- A. SMGR IP address
- B. The IP of the remote server providing High Availability
- C. Subnet network mask
- D. Network Time Protocol (NTP) settings.
- E. Default Gateway IP

Correct Answer: ACD

QUESTION 3

The Data Replication Service replicates data from the master database to local copies of the database on each Session Manager instance. It is important that the master and local database are synchronized. How would an administrator check that the databases are synchronized?

- A. Run initDRS
- B. View the Session Manager Security Module status.

- C. Execute the '\\Test Postgres database sanity\\' maintenance test
- D. Check the status of the Replica Group

Correct Answer: C

QUESTION 4

What is the benefit of using the Communication Profile Editor to modify users?

- A. It allows an administrator to change some values of a User Profile for multiple SIP users at one time.
- B. It allows an administrator to change the values of the Session Manager Profile settings for only a single SIP System Manager user at one time.
- C. It allows an administrator to change some values of the Communication Profile settings for multiple SIP System Manager Users at one time.
- D. It allows an administrator to change all values of a User Profile for multiple users at one time.

Correct Answer: B

QUESTION 5

During a post-installation check of System Manager and Session Manager you discover that the Session layer replica node is stuck at "Synchronizing". You run the initTM command in Session Manager but the replication status does not change. Which step will be effective in resolving the problem?

- A. Reset the enrollment password.
- B. Run traceSM to monitor the synchronization events and restart the Security Module.
- C. Delete the Session Manager Replica node in System Manager, verify the enrollment password is valid In System Manager and run the initTM command again in Session Manager.
- D. Verify the enrollment password is valid in System Manager and run the initTM command again in Session Manager.

Correct Answer: D
