## QUESTION 1

The screenshot shows the Cisco Unified Communications Manager (CUCM) user creation interface. The 'Identity' tab is active, displaying fields for Last Name, First Name, Middle Name, Description, Login Name, Authentication Type (Basic), Password, and Confirm Password. The 'Communication Profile' tab is also visible, showing fields for Communication Profile Password and Confirm Password. Red boxes highlight the Password and Confirm Password fields in the Identity tab, and the Communication Profile Password and Confirm Password fields in the Communication Profile tab.

When creating a New User Profile, an administrator is asked to enter two separate passwords for the new user. Which statement best describes the need for two different passwords?

- A. The Identity password is used in authenticating the user when accessing the user's management console, while the Communication Profile is used to authenticate the user when logging in on a telephone.
- B. The Communication Profile is the prime password for authenticating the user while the Identity password is a backup password used to reset the Communication Profile in cases where the prime password is forgotten.
- C. The Identity password is used when logging in to a telephone that connected to the corporate network while the Communication Profile is used while logging in with a VPN telephone or the corporate network.
- D. The Identity password is used when logging into a telephone in to a communication profile password enables further privileges and capability.

Correct Answer: A

## QUESTION 2

Which header in the request is considered by Session Manager when it is trying to match a dialed number?

- A. Session Manager attempts to match the FROM header of a request to a defined dial pattern.
- B. Session Manager attempts to match to the header of a request to a defined dial pattern.
- C. Session Manager attempts to match the request-URI header of a request to a defined dial.
- D. Session Manager attempts to match the ROUTE header of a request to a defined dial pattern.

Correct Answer: C

---

### QUESTION 3

On a SIP Entity that is defined as type session Manager, what should be defined?

- A. an adaptation
- B. listening ports
- C. an outbound proxy
- D. a credential name

Correct Answer: B

---

### QUESTION 4

Which two statements about backing up System Manager (SMGR) product and user profile data are true? (Choose two)

- A. It is used when moving user details from one SMGR to another SMGR in the Avaya Aura eco- system.
- B. It is made to a file location, either on or off the SMGR server.
- C. It is made to preserve user and other configuration data during a SMGR upgrade.
- D. It is used later when attempting to restore role definitions that may have become corrupted without affecting other configuration changes made after the backup was taken.

Correct Answer: BC

---

### QUESTION 5

Which three statements about a user's profile are correct? (Choose three.)

- A. Branch Session Manager (BSM) association is set in the Session Manager Profile under the user's Communication Profile. If a primary Session Manager has been selected then assigning a BSM mandatory.
- B. Using the Endpoint Profile a user can be assigned a station on a Communication Manager that SMGR knows about.
- C. The difference between the 'SMGR Login Password' and the 'Shared Communication Profile Password' is that one allows the user to login to the SMGR web interface and the other allows them to authenticate at a device.
- D. A user may be assigned exactly one role. That single role can allow access to multiple resource types.
- E. User identity authentication (password checking) can be achieved by first configuring SMGR to communicate with an LDAP server and then choosing the profile 'Authentication Type' as 'Enterprise'.

Correct Answer: BCE
