QUESTION 1

Fill in the blank with the appropriate term. A is a block of data that a Web server stores on the client computer.

Correct Answer: cookie

Cookie is a block of data, which a Web server stores on the client computer. If no expiration date is set for the cookie, it expires when the browser closes. If the expiration date is set for a future date, the cookie will be stored on the client's disk after the session ends. If the expiration date is set for a past date, the cookie is deleted.

QUESTION 2

Adam, a malicious hacker, is sniffing an unprotected Wi-Fi network located in a local store with Wireshark to capture hotmail e-mail traffic. He knows that lots of people are using their laptops for browsing the Web in the store. Adam wants to sniff their e-mail messages traversing the unprotected Wi-Fi network. Which of the following Wireshark filters will Adam configure to display only the packets with hotmail email messages?

- A. (http = "login.pass.com") andand (http contains "SMTP")
- B. (http contains "email") andand (http contains "hotmail")
- C. (http contains "hotmail") andand (http contains "Reply-To")
- D. (http = "login.passport.com") andand (http contains "POP3")

Correct Answer: C

Adam will use (http contains "hotmail") andand (http contains "Reply-To") filter to display only the packets with hotmail email messages. Each Hotmail message contains the tag Reply-To: and "xxxx-xxx- xxx.xxx.hotmail.com" in the received tag. Wireshark is a free packet sniffer computer application. It is used for network troubleshooting, analysis, software and communications protocol development, and education. Wireshark is very similar to tcpdump, but it has a graphical front-end, and many more information sorting and filtering options. It allows the user to see all traffic being passed over the network (usually an Ethernet network but support is being added for others) by putting the network interface into promiscuous mode. Wireshark uses pcap to capture packets, so it can only capture the packets on the networks supported by pcap. It has the following features: Data can be captured "from the wire" from a live network connection or read from a file that

records the already-captured packets. Live data can be read from a number of types of network, including Ethernet, IEEE 802.11, PPP, and loopback. Captured network data can be browsed via a GUI, or via the terminal (command line)

version of the utility, tshark. Captured files can be programmatically edited or converted via command-line switches to the "editcap" program. Data display can be refined using a display filter. Plugins can be created for dissecting new protocols.

Answer options B, A, and D are incorrect. These are invalid tags.

QUESTION 3

Which of the following is used in conjunction with smoke detectors and fire alarm systems to improve and increase public safety?

- A. Gaseous fire suppression
- B. Gaseous emission system
- C. Fire sprinkler
- D. Fire suppression system

Correct Answer: D

QUESTION 4

Match the following NIST security life cycle components with their activities:

- A. 1-iv, 2- iii,3-v,4-i
- B. 1-ii,2-i,3-v,4-iv
- C. 1-i,2-v,3-iii,4-ii
- D. 1-iii,2-iv,3-v,4-i

Correct Answer: A

QUESTION 5

Fill in the blank with the appropriate term.

A gateway is a type of network gateway that provides the added capability to control devices across the Internet.

Correct Answer: home automation

A home automation gateway is a type of network gateway that provides the added capability to control devices across the Internet. Most gateways plug in to the home broadband router (and a wall outlet for power). When connected to a router that has Internet connectivity, the automation gateway helps in enabling computers and Web-enabled phones to remotely access automation devices at home.
