You have setup an autonomous AP and configured an SSID to serve clients. While troubleshooting a client that is not able to associate to the SSID, you enable some debugs. Given the debug output seen in the exhibit, what is most likely the cause of association failure?

- A. The SSID is configured with TKIP encryption and the client PC is using AES encryption.
- B. The authenticating EAP method is PEAP and the username and password combination is incorrect.
- C. The SSID is secured with PSK and the shared secret is wrong.
- D. The RADIUS server is rejecting the dot1x authentication due to a message integrity check failure.

Correct Answer: C

QUESTION 5

Refer to the exhibit.

This Connection is Untrusted

You have asked Firefox to connect securely to 2.2.2.2, but we can't confirm that your connection is secure.

Normally, when you try to connect securely, sites will present trusted identification to prove that you are going to the right place. However, this site's identity can't be verified.

What Should I Do?

If you usually connect to this site without problems, this error could mean that someone is trying to impersonate the site, and you shouldn't continue.

- ▶ Technical Details
- ▶ I Understand the Risks

All the guest users that associate to the guest SSID on the Cisco WLC are receiving this message from their browser each time that they try to reach an Internet website. Which two changes will allow the guest users to avoid this message in a simple and secure way? (Choose two.)
