100% Passing Guarantee  
100% Money Back Assurance

Following Questions and Answers are all new published by Cisco  
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

A VPLS network consists of provider edge routers that have fully meshed pseudowires. This network runs both unicast and multicast traffic. This network recently experienced bandwidth- and CPU-related performance issues. While monitoring the VPLS statistics and interface statistics, you note that the network is experiencing an unusual amount of broadcasts and undesired multicast on the network. Which two techniques should the operations team consider in addressing these problems? (Choose two.)

- A. Enable split horizon between all the pseudowires in the VPLS network.
- B. Implement MAC withdrawal on each EFP in the VPLS bridge domain.
- C. Change the network to run VPWS to manage the broadcasts efficiently.
- D. Set a limit on MAC learning in the VPLS network.
- E. Implement IGMP snooping in the VPLS network.
- F. Implement Storm Control in the VPLS bridge domain.

Correct Answer: EF

---

### QUESTION 2

According to ITIL v3 framework, which specific Event Management mechanism includes how events are generated, which data is included in the event record, and where those events are logged?

- A. error messaging
- B. alert detection
- C. instrumentation
- D. threshold identification

Correct Answer: C

---

### QUESTION 3

A Cisco IOS router is experiencing continuous OSPF adjacency flapping. Further investigation revealed that CPU utilization of OSPF process is very high. The problem is limited to this router. What is the most likely reason for this issue?

- A. A DoS attack targeted at the OSPF process is in progress.
- B. There is a routing loop in the network that involves this router.
- C. A transport problem is causing frequent interface flapping.
- D. A corrupted OSPF packet is received from a neighboring router.

E. OSPF packets are fragmented due to MTU misconfiguration.

Correct Answer: A

---

#### QUESTION 4

A rollout plan from engineering has been sent to the NOC for deployment. Part of the plan involves a complex software upgrade to a network element. The method of procedure provided by engineering is nearly 100 individual steps long. Where do you expect to find backout procedures to be specified?

- A. after each step that causes a change to the network
- B. after every 20 (+/- 5) steps
- C. after the midway point
- D. after the method of procedure is completed
- E. both after the midway point and after the method of procedure is completed

Correct Answer: D

---

#### QUESTION 5

In addition to a DoS attack, what are three reasons that cause an increase in the CPU use of a route processor or the line card of a router? (Choose three.)

- A. processing packets that do not cause an exception
- B. receiving a packet greater than the MTU of the interface
- C. processing IPv6 packets lacking extension headers
- D. packets requiring fragmentation
- E. traffic that matches an ACL line that uses log keyword
- F. processing packets with IP options

Correct Answer: DEF
