QUESTION 1

A cloud architect is trying to determine the operational impacts of adding another business group (DevOps) to the company\\'s existing vRealize Automation (vRA) deployment. Existing users have reported that response times for login into their

vRA infrastructure has spiked recently and it is taking longer than usual. The Active Directory user base, after the addition of DevOps users, could increase to well over 100,000 users and 50 groups.

What is the VMware-recommended design to address this scenario?

A. Add an additional connector to the existing Active Directory.

B. Add an additional IaaS proxy agent.

C. Add an additional IaaS DEM server.

D. Change the default access policy when adding the additional user base.

E. Increase the vRA virtual appliance memory allocation on each machine as per sizing guidelines.

Correct Answer: E

QUESTION 2

When assigning fabric administrator role to a user or group of users who will manage the implemented fabric group design of the vRealize Automation deployment, which are three considerations to take into account? (Choose three.)

A. The architect can add the fabric administrator role to a system-wide role such as IaaS administrator or system administrator, so that the fabric administrator can create reservations for any tenant, NOT just their own.

B. The fabric administrator manages physical machines and compute resources assigned to their fabric group(s) and creates and manages the reservations and policies associated with those 1sources within the scope of their tenant.

C. The fabric administrator is responsible for user and group management, notifications and business policies such as approvals and entitlements.

D. The fabric administrator manages property groups, n1achine prefixes and the property dictionary t hat are used across all tenants and business groups.

E. The fabric administrator tracks resource usage by all users within the fabric group and initiates reclamation requests for virtual machines.

Correct Answer: ABD

QUESTION 3

An architect has been asked to design a machine blueprint for the development team. The machine(s) of each deployment must contain dynamically-assigned unique IP\\'s that could be reached by the resources on the corporate network. Which type of network should the architect recommend for this blueprint?

A. On-Demand NAT Network

B. Existing Network

C. On-Demand Routed Network

D. On-Demand Load Balancer

Correct Answer: A

QUESTION 4

An architect was tasked with providing a temporary vRealize Automation instance for a test environment that includes a single vRealize Automation appliance and an IaaS server that includes a SQL database instance. After testing is complete, the architect is tasked to convert the existing instance into a distributed, load-balanced instance to be used for production. Which design solution would best address this request?

A.
- Deploy a load balancer that routes appropriate traffic to the existing instance.
- Deploy additional vRealize Automation appliances and join them to the existing machine to create a cluster.
- Deploy additional IaaS servers for Web, Manager, DEM workers and Agents.

B.
- Deploy additional vRealize Automation appliances and join them to the existing machine to create a cluster.
- Deploy additional IaaS servers for Web, Manager, DEM workers, and Agents.
- Add the additional IaaS servers from the cluster tab under the vRealize Automation management page.

C.
- Deploy a new distributed load-balanced vRealize Automation environment.
- Configure directories and groups the same as for the proof-of-concept instance.
- Import the test-managed machines into the new instance using migration.

D.
- Deploy a new distributed load-balanced vRealize Automation environment.
- Configure directories and groups the same as for the proof-of-concept instance.
- Import the test-managed machines into the new instance using bulk import.

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: A

QUESTION 5

A company has a service called Databases with a MySQL and a PostgreSQL catalog item within it. The architect has created a new blueprint for MS SQL Server and added the published catalog item to the Databases service. Management has requested that the MS SQL Server catalog item be available only to the Enterprise business group. Currently, the Developers business group has access to the entire Databases service with the existing MySQL and PostgreSQL catalog items. Which two should the architect recommend to reconfigure Developers and Enterprise entitlements to meet these requirements? (Choose two.)

A. Edit the Enterprise entitlement and add the MS SQL Server catalog item.

B. Edit the Enterprise entitlement and add the Databases service and the MS SQL Server catalog item.

C. Edit the Developers entitlement and remove the Databases service and add the MySQL and PostgreSQL catalog items individually.

D. Edit the Developers entitlement and add the MySQL and PostgreSQL catalog items individually.

Correct Answer: AD
