QUESTION 1

The architect for a teaching hospital is planning the deployment of a highly-distributed cloud management platform based on VMware vRealize Automation. The design must ensure that all virtual machines should be setup in a prescribed

order.

vSphere 6.5 will be used as the deployment platform.

vSphere Availability VM Groups and VM Rules will be used.

The design will use vRealize Orchestrator embedded in the vRealize Automation Appliances.

Place the virtual machine groups in the correct start-up order.

Select and Place:

Virtual Machine Groups

vRealize Automation IaaS Managers
vRealize Automation IaaS Web Servers
External vRealize Automation Database Server (Microsoft SQL Server)
vRealize Automation IaaS DEM Workers
vRealize Automation Virtual Appliances

Correct Order

Correct Answer:

Virtual Machine Groups

Correct Order

External vRealize Automation Database Server (Microsoft SQL Server)
vRealize Automation Virtual Appliances
vRealize Automation IaaS Web Servers
vRealize Automation IaaS Managers
vRealize Automation IaaS DEM Workers

QUESTION 2

A company is in the initial stage of planning a vRealize Automation project for its cloud datacenter. It wants to provide self-service provisioning of applications based on templates created by IT and application subject matter experts. Security policy will be predefined by the security team and applied dynamically as new application instances are provisioned. The existing private cloud infrastructure will be utilized to host this, along with existing Active Directory and other common infrastructure such as the enterprise IP address management system. Which are two design constraints in this scenario? (Choose two.)

- A. There may be insufficient capacity.
- B. The existing IP address management system must be used.
- C. There are existing DNS and NTP servers.
- D. No further ESXi hosts can be added.

Correct Answer: AB

QUESTION 3

An architect has been asked to design an application blueprint that contains a Web server, Application server, and Database server. The servers\ software will be installed during provisioning from vRealize Automation. When working with a full- stack application in a converged blueprint, what should the architect recommend regarding the dependency configuration and most appropriate build order?

- A. Configure a software dependency requiring the database software to complete before starting the web and application software.
- B. Configure a machine dependency requiring the application machine to complete before starting the remaining machine provisioning.
- C. Configure a software dependency requiring the application software to complete before starting the web and application software.
- D. Configure a machine dependency requiring the web machine to complete before starting the remaining machine provisioning.

Correct Answer: A

QUESTION 4

A company is looking for a showback and chargeback method to allocate costs for all workloads provisioned using the VMware Cloud Management Platform. The Cloud Architecture team must ensure that costs are calculated dynamically every 24 hours, and applied based on the application type and size.

Which two steps should be taken to ensure this data is captured? (Choose two.)

- A. Specify "vRealize Automation Blueprint" as the Compute grouping strategy.
- B. Ensure that vRealize Business for Cloud is the default cost provider for vRealize Automation.
- C. Specify "vRealize Automation Reservation" as the Compute grouping strategy.
- D. Set pricing for the Compute Rates for vCPU and per GB RAM and Storage Rates in vRealize Business for Cloud.

E. Ensure that the data collection interval for vRealize Business is set to 24 hours.

Correct Answer: BD

QUESTION 5

Development team members would like to build new virtual machines using vRealize Orchestrator workflow.

They would also like them to be added automatically to DNS prior to initial start. The domain administration team is responsible for DNS and requires review of any DNS entry requests prior the creation of new machines.

Which design will satisfy these requirements?

- A.
 - Design an Event Broker subscription for the machine using the CloneWorkflow.BuildComplete Provisioning State name.
 - Design a post-approval for the XaaS component that is assigned to the development team requiring authorization to process the XaaS workflow.
- B.
 - Design an Event Broker subscription for the machine using the CloneWorkflow.InitialPowerOn Provisioning State name.
 - Design a pre-approval for the Event Broker subscription that is assigned to the development team requiring authorization to process the XaaS workflow.
- C.
 - Design an XaaS workflow for adding the machines to DNS and add it to the development catalog.
 - Design a post-approval for the machine that is assigned to the domain administration team requiring authorization to build the machine.
- D.
 - Design an XaaS workflow for adding the machines to DNS and add it to the blueprint.
 - Design an pre-approval for the machine that is assigned to the domain administration team requiring authorization to build the machine.

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: A
