QUESTION 1

The iLBC codec operates at 38 bytes per sample per 20-millisecond interval. What is its codec bit rate in kilobits per second?

A. 6.3

B. 13.3

C. 15.2

D. 16

E. 24

Correct Answer: C

The internet Low Bit Rate Codec (iLBC) is designed for narrow band speech and results in a payload bit rate of 13.33 kbits per second for 30-millisecond (ms) frames and 15.20 kbits per second for 20 ms frames. When the codec operates at block lengths of 20 ms, it produces 304 bits per block, which is packetized as defined in RFC 3952. Similarly, for block lengths of 30 ms it produces 400 bits per block, which is packetized as defined in RFC 3952. The iLBC has built-in error correction functionality to provide better performance in networks with higher packet loss.

QUESTION 2

A Cisco collaboration architect is evaluating a list of codecs to use in a voice infrastructure. Which three facts are associated with iSAC and should be considered in the decision? (Choose three)

A. The codec has better quality with less bandwidth for sideband applications.

B. The codec will not be supported in TDM voice gateways.

C. The codec will adjust its bandwidth consumption to the network conditions.

D. The codec will not be available for H.323 and MGCP devices.

E. The codec will not support low complexity.

F. The codec will not be supported by SCCP configured on DSPFARMS.

Correct Answer: ACE

QUESTION 3

Assuming all route patterns below are configured on a Cisco UCM, which route pattern will be matched when a user dials 2001?

A. 200[1-4] configured with nonurgent priority

B. 200X configured with urgent priority

C. 200! configured with urgent priority

D. 200[^2-4] configured with urgent priority

E. 20[02-4]1 configured with urgent priority

Correct Answer: B

QUESTION 4

Which two Device Pool configuration settings will override the device-level settings when a device is roaming within or outside a device mobility group? (Choose two.)

A. Adjunct CSS

B. Device Mobility CSS

C. Network Locale

D. Called Party Transformation CSS

E. AAR CSS

F. Device Mobility Group

Correct Answer: CF

The parameters under these settings will override the device-level settings when the device is roaming within or outside a Device Mobility Group. The parameters included in these settings are: ?Date/time Group ?Region ?Media Resource Group List ?Location ?Network Locale ?SRST Reference ?Physical Location ?Device Mobility Group The roaming sensitive settings primarily help in achieving proper call admission control and voice codec selection because the location and region configurations are used based on the device\\'s roaming device pool.

QUESTION 5

In a multicluster deployment model, a customer is using centralized TFTP service. Firewalls are being implemented between each of the clusters. After the installation of the firewalls, the centralized TFTP stopped serving files. What must be changed on the firewalls to fix this issue?

A. Open TCP port 22 between the leaf clusters and the central cluster.

B. Open TCP port 443 between the leaf cluster and the central cluster.

C. Open TCP port 8443 between the leaf cluster and the central cluster.

D. Open UDP port 69 between the leaf cluster and the central cluster.

E. Open TCP port 80 between the leaf cluster and the central cluster.

F. Open UDP port 500 to enable certificate synchronization between the TFTP servers.

Correct Answer: D
