QUESTION 1

When will the primary processor core dump run in case of a switchover?

- A. never takes place
- B. periodically
- C. during switchover
- D. after switchover
- E. before switchover

Correct Answer: D

In networking devices with redundant processors, the Post-Switchover Core Dump feature uses better software communication techniques between redundant processors to allow the switchover to occur before dumping core information. Not having to wait for dump operations effectively decreases the switchover time between processors. The newly active primary processor runs the core dump operation after switchover Reference. http://www.cisco.com/en/US/docs/ios/12_0st/12_0st18/feature/guide/coredump.html
