### QUESTION 1

Which NSS feature allows total size of all volumes on a partition to exceed the physical size of the partition itself?

- A. SnapShot
- B. Shredding
- C. Migration
- D. Encryption
- E. Overbooking
- F. Compression

Correct Answer: E

---

### QUESTION 2

The default object rights assignment for which entity allows unauthenticated users to browse objects in the eDirectory tree?

- A. Public
- B. [ROOT]
- C. The server object
- D. The top-level container object in the tree

Correct Answer: A

---

### QUESTION 3

Which term describes the way rights granted to a container object flow down to all objects within the container?

- A. Filtering
- B. Inheritance
- C. Replication
- D. Partitioning
- E. Synchronization
- F. Distributed Administration

Correct Answer: B

---

#### QUESTION 4

Which network protocols can be used by the Novell Client to communicate with an OES NetWare server? (Choose 2.)

- A. IP
- B. IPX
- C. AFP
- D. ICMP
- E. NetBEUI
- F. Server Message Blocks

Correct Answer: AB

---

#### QUESTION 5

You're implementing OES NetWare for a small business client: Jessica's Bakery. There is only one server in the network. You've named the server BAKERY1 and installed it into an eDirectory tree named JESSICASBAKERY-TREE. You've

used a random password generator to create a password for the tree's Admin user.

You've placed the server hardware next to the point-of-sale system in the customer area of the bakery. All workstations have the latest Novell Client installed on them. You created a directory named SHARED on the server's DATA volume

where employees can share files. Does this configuration meet Novell's security recommendations?

- A. Yes, all Novell Security guidelines have been met.
- B. No, you shouldn't use shared directories.
- C. No, the server should be located in a locked room.
- D. No, passwords created with a random password generator aren't complex enough.
- E. No, you shouldn't use the business name in the server or eDirectory tree names.

Correct Answer: C
