QUESTION 1

Which of the following is TRUE regarding the operation of an automatic Warm Standby system? (Choose 2)

- A. An active database can have one or more standby databases and any database can contain both active and standby data.
- B. All DML and DDL changes to the active system are replicated to the standby system.
- C. The minimally logged command `truncate table` is a DML command that is replicated in a Warm Standby system.
- D. The `SELECT INTO` command is replicated because all tables in the active system are marked for replication to the standby.

Correct Answer: BC

QUESTION 2

Which statement is CORRECT about dump marker?

- A. It dumps all transactions into a Stable Device.
- B. It instructs ASE to write a dump marker to the log when dump begins.
- C. It dumps all transactions for primary database and truncates the log.
- D. It instructs Replication Server to write a dump marker in the Stable Device.

Correct Answer: B

QUESTION 3
