### QUESTION 1

Which of the following statements about stored procedure replication is FALSE?

- A. Replication of stored procedures can be initiated at the Replicate dataserver.
- B. A replicated stored procedure is replicated with its parameters to a replicate database.
- C. The function Replication Definition for a stored procedure is defined at the Primary Replication Server.
- D. Replication of a stored procedure from a replicate database requires a RepAgent.
- E. A replicated stored procedure must modify data in order to be replicated.

Correct Answer: E

---

### QUESTION 2

Which of the following statements describe the behavior of Publications? (Choose 2)

- A. Improve replication performance
- B. Degrade replication performance
- C. May centralize administrative effort
- D. May reduce total administrative effort

Correct Answer: CD

---

### QUESTION 3

What is the maximum number of routes that can exist between a given pair of Replication Servers?

- A. One direct route
- B. Two direct routes
- C. One direct and one indirect
- D. Two direct and one indirect
- E. One direct and one indirect in each direction

Correct Answer: B

---

#### QUESTION 4

Which option is used to start Replication Server in standalone mode?

- A. -S
- B. -K
- C. -M
- D. -C

Correct Answer: C

---

#### QUESTION 5

Given the following table and stored procedure:

```
create table t (a int) create procedure p @param int as insert t values (@param)
```

A Replication Definition exists for table 't'. Table 't' and stored procedure 'p' are both marked for replication. What will be replicated when the following code is executed without errors:

```
begin transaction insert t values (100) execute p 101 commit execute p 102
```

- A. One 'execute' operation is replicated
- B. One 'insert' and one 'execute' operations are replicated
- C. One 'insert' and two 'execute' operations are replicated
- D. Three 'insert' and two 'execute' operations are replicated

Correct Answer: C
