QUESTION 1

An administrator has been tasked with increasing the available capacity within an existing Cloud Foundation deployment to support the deployment of a production Workload Management cluster.

The VMware Cloud Foundation environment consists of a single workload called Production. The Production workload domain consists of a single vSAN Cluster called Production-01 that existing Virtual Machines. During the original deployment, even through automated firmware updates were not required, the Production workload domain was configured to use vSphere Lifecycle Images to automate its ongoing lifecycle management.

Four new hosts have been commissioned in SDDC Manager to support Workload Management. The new hosts are identically configured to the hosts that are currently deployed into the Production-01 cluster.

Which process must the administrator complete to enable Workload Management?

- A. Create a new vSAN Cluster within a new vSphere Lifecycle Manager Image-based workload domain.
- B. Create a new vSAN Cluster within a new vSphere Lifecycle Manager Baseline-based workload domain.
- C. Extend the Production-01 vSAN cluster with the additional four hosts.
- D. Create a new vSAN Cluster within the Production workload domain

Correct Answer: C

QUESTION 2

An administrator is required to deploy a new workload domain for a new business unit that must use its own NSX-I instance.

Which two Components will be deployed in the management domain during the workload domain creation? (Choose two.)

- A. NSX-T Manager
- B. Standalone Platform Services Controller
- C. vCenter Server
- D. NSX-T Edge node
- E. Additional SDDC Manager

Correct Answer: AC

QUESTION 3

An Enhanced Linked Mode of vCenter Server is being used to easily log in to every vCenter Server instance How many vCenter Server instances in a single vCenter Single Sign-On domain are supported?

- A. 15

B. 16

C. 7

D. 8

Correct Answer: A

QUESTION 4

An administrator is preparing to enable the vSphere with Tanzu for workload management.

Which selection must be made when automating the deployment of the NSX-T Edge Cluster using the SDDC Manager UI (user interface)?

A. Select the Workload Management use case

B. Select the Custom use case, and then select the large Edge Form Factor

C. Select the Workload Management use case, and then select the large Edge Form Factor

D. Select the Custom use case, and then select the small Edge Form Factor.

Correct Answer: C

QUESTION 5

Which step should be followed to restore SDDC Manager using the OVF tool?

A. Retrieve the DNS name or IP address of a host in the management Domain

B. Use the host's DNS name in the host password_vault.json, and this will display the root password

C. Install the OVF Tool on a system in the VI Workload domain.

D. Move the SDDC Manager VM into the VI Workload Resource Pool.

Correct Answer: A
