QUESTION 1

What is the purpose of network ranges in conditional access policies?

- A. Network ranges are a fallback authentication method for an application.
- B. Network ranges limit access to an application depending of the source IP address.
- C. All applications are using the new network range by default.
- D. Network ranges limit access to an application depending of the destination IP address.

Correct Answer: B

QUESTION 2

The latest Configuration Service Provider (CSP) release by Microsoft might not always be visually available in Workspace ONE UEM to configure.

What should be used to create custom settings to distribute through Workspace ONE UEM if that is true?

- A. Download the add-on from my.workspaceone.com.
- B. Click the Update button in the Custom Settings profile.
- C. Use the Device Description Framework.
- D. Export them from GPO.

Correct Answer: C

The latest Configuration Service Provider (CSP) release by Microsoft might not always be visually available in Workspace ONE UEM to configure. In this case, an admin can use Device Description Framework (DDF) to create custom settings to distribute through Workspace ONE UEM.
