**QUESTION 1**

In a centralized Cisco IPS appliance deployment, it may not be possible to connect an IPS appliance to every switch or segment in the network. So, an IPS appliance can be deployed to inspect traffic on ports that are located on multiple remote network switches. In this case, which two configurations required? (Choose two.)

A. IPS promiscuous mode operations

B. in-line IPS operations

C. RSPAN

D. SPAN

E. HSRP

F. SLB

Correct Answer: AC

RSPAN aznd promiscuous From Chip: No specific reference --- is in Videos from CBT

**QUESTION 2**

Which two Cisco IPS modules support sensor virtualization? (Choose two.)

A. AIP-SSM

B. AIP-SSC

C. IPS AIM

D. IPS NME

E. IDSM-2

Correct Answer: AE

http://my.safaribooksonline.com/book/certification/ccnp/9780132372107/using-cisco-ips-virtual- sensors/ch20lev1sec5

**QUESTION 3**

Which Cisco IPS appliance feature is best used to detect these two conditions? 1) The network starts becoming congested by worm traffic. 2) A single worm-infected source enters the network and starts scanning for other vulnerable hosts.

A. global correlation

B. anomaly detection

C. reputation filtering

D. custom signature

E. meta signature

F. threat detection

Correct Answer: B

http://www.cisco.com/en/US/docs/security/security_management/cisco_security_manager/security
_manager/4.0/user/guide/ipsanom.html

Anomaly detection identifies worm-infected hosts by their behavior as a scanner. To spread, a worm virus must find new hosts. It finds them by scanning the Internet using TCP, UDP, and other protocols to generate unsuccessful attempts to access different destination IP addresses. A scanner is defined as a source IP address that generates events on the same destination port (in TCP and UDP) for too many destination IP addresses.

---

**QUESTION 4**

From Cisco Security Manager, which external component or service is used to access in-depth signature information?

A. Cisco SensorBase

B. Cisco Security MARS

C. Cisco IntelliShield Service

D. ScanSafe Service

Correct Answer: C

http://www.cisco.com/en/US/services/ps2827/ps6834/services_overview0900aecd803e85ee.pdf

---

**QUESTION 5**

Select and Place:

[642-627 VCE Dumps](...) | [642-627 Practice Test](...) | [642-627 Study Guide](...)

3 / 6

Click and drag the IPS deployment mode on the left to the correct description on the right.

| IPS deployment mode | Description |
|---|---|
| inline interface pair | Inspect all traffic between two network domains using a single LAN switch. |
| inline VLAN pairs | A pair of sensing interfaces can be virtualized into multiple logical sensors that can be analyzed separately. |
| inline VLAN groups | Supported on Cisco ASA AIP-SSM, IPS AIM, and IPS NME modules. |
| selective inline analysis | Physical separation between networks is desired and all traffic should be analyzed. |
| promiscuous mode | Can use a hub or a network tap to copy network traffic to a sensing interface of the Cisco IPS sensor. |

**Correct Answer:**

Click and drag the IPS deployment mode on the left to the correct description on the right.

| | IPS deployment mode |
|---|---|
| | inline VLAN pairs |
| | inline VLAN groups |
| | selective inline analysis |
| | inline interface pair |
| | promiscuous mode |
