### QUESTION 1

An engineer installed a Cisco Aironet 1400 Wireless Bridge as a central bridge. Which is the maximum power setting for a point-to-multipoint link?

- A. 12 dBm
- B. 13 dBm
- C. 22 dBm
- D. 24 dBm

Correct Answer: A

---

### QUESTION 2

Which two of the following are considered best practices upon the completion of a wireless installation? (Choose two.)

- A. Consult with the customer to ensure that the IT staff has a complete set of design and installation documents.
- B. Test all the customer's wireless devices and applications to ensure they are working properly.
- C. Make sure the customer is aware that they should consider purchasing a support contract immediately after the installation is complete.
- D. Spend time with the customer showing them the controller GUI as well as inform them how they can reach the Cisco TAC if they have any problems.

Correct Answer: AB

---

### QUESTION 3

When using WCS 7.0 to calibrate a floor, is it more important to collect 50 or more distinct locations or to collect 150+ measurements?

- A. 150+ measurements are more important than the locations because the information gathered is more granular.
- B. Collecting 50 or more distinct locations is more important because this provides a wider coverage across the floor being calibrated.
- C. Depending on the size of the floor 50+ distinct locations and 150+ measurements may provide divergent information that requires more data collection.
- D. When calibrating a floor 50 or more distinct locations will yield 150+ measurements because multiple measurements are collected at each distinct location.

Correct Answer: D

---

#### QUESTION 4

In performing a post-deployment audit, you are concerned by significant changes in measured RSSI and SNR values taken on a wireless client in one location. How do you explain the differences in these values?

- A. The differences in the RSSI and SNR values are a result of signal diffusion in the environment.
- B. The differences in the RSSI and SNR values are a result of multipath in the environment.
- C. The differences in the RSSI and SNR values are a result of signal absorption in the environment.
- D. The differences in the RSSI and SNR values are a result of signal diffraction in the environment.

Correct Answer: B

---

#### QUESTION 5

Which statement best describes an outdoor RF point-to-point antenna deployment?

- A. Both antennas must be vertically polarized.
- B. Both antennas must be horizontally polarized.
- C. There should be a 90 degree difference between antennas for best results.
- D. There should be a 180 degree difference between antennas for best results.
- E. It does not matter so long as both antennas have matching polarization.

Correct Answer: E
