QUESTION 1

Which three benefits are provided by the implementation of Cisco UCS C-Series servers into a virtualized data center environment? (Choose three.)

- A. blade-based deployments
- B. enterprise-focused design
- C. advanced orchestration
- D. cost-effective server
- E. storage-intensive platform
- F. extended memory support

Correct Answer: DEF

Virtualizing Cisco Unified Communications Solutions offers the following benefits:

?Better Utilization

The Cisco UCS with VMware vSphere supports greater virtual machine density than any comparable platform.

?A Radically Simplified Architecture

The Cisco UCS has up to 50 percent fewer components to purchase, configure, manage, power, and cool.

?More Memory at Lower Cost

Cisco Extended Memory enables more memory per two-socket server, which reduces memory costs by up to 60 percent.

?A Powerful, Converged Network

The Cisco unified fabric supports all traffic types, while reducing adapter, cable, and switch requirements by more than 50 percent.

?Efficient Management

Cisco UCS Manager and VMware vCenter provide efficient, tightly integrated management of all physical and virtual assets.

A High Quality User Experience

Higher performance and simpler scaling helps IT deliver a better experience to more users.

?Leading Virtual Machine Performance

The Cisco UCS has posted one of the top scores on the VMware VMmark virtualization benchmark.

?Faster Network and Storage Access

Cisco virtual interface cards and VMware VMDirectPath technology increase network throughput by up to 30 percent.

QUESTION 2

Which Cisco product family can simultaneously implement firewall, VPN, content security, network access control, and services virtualization?

- A. Cisco Catalyst Switches
- B. Cisco Adaptive Security Appliances
- C. Cisco Intrusion Prevention Systems
- D. Cisco ProtectLink Gateways

Correct Answer: B

Among its benefits, Cisco ASA Software: offers integrated IPS, VPN, and Unified Communications capabilities helps organizations increase capacity and improve performance through clustering delivers high availability for high resiliency applications provides firewalling, content security, and network access control. facilitates dynamic routing and site-to-site VPN on a per-context basis

QUESTION 3

Which three options are primary benefits of Cisco CleanAir technology? (Choose three.)

- A. detects, locates, and mitigates Wi-Fi and non-Wi-Fi interference sources
- B. uses multicast to improve rich-media applications
- C. visualizes performance-impacting interference and automatically adjusts network settings to avoid interference
- D. self-heals and optimizes wireless network
- E. delivers real-time spectrum intelligence
- F. delivers a comprehensive approach to business mobility

Correct Answer: ACD

CleanAir technology:

provides continual, system-wide discovery without performance impact accurately identifies source, location, and scope of interference takes automatic action to avoid current and future interference, with full history reporting

QUESTION 4

What is the goal of the Cisco Borderless Network Architecture?

- A. to provide users with a single device that permits access to information anywhere
- B. to provide users with the same productivity and access to information no matter where they are or which device they use

- C. to eliminate the need for border security and firewalls
- D. to provide companies with a way to extend their security and control over employees on the Internet

Correct Answer: B

The Borderless Networks architecture enables organizations around the world to connect anyone, anywhere, using any device -- securely, reliably and seamlessly, so they can be just as productive from anywhere they may be as they would be by physically being in the office.

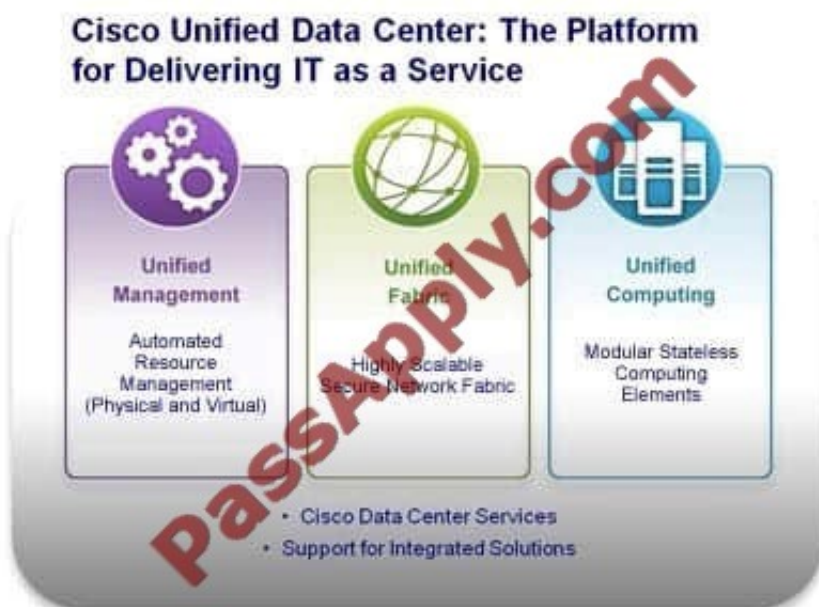

QUESTION 5

Which three statements correctly describe the Cisco Unified Data Center pillars? (Choose three.)

- A. Cisco Unified Management combines the Cisco Intelligent Automation for Cloud with the UCS manager and Network Services Manager to simplify cloud application delivery.
- B. Cisco Unified Management provides foundational connectivity to link resources within and across data centers on demand.
- C. Cisco Unified Computing System dynamically delivers multiple services, such as WAN, that can be configured on demand.
- D. Cisco Unified Computing System is a next-generation data center platform that unites computing, network, storage, and virtualization.
- E. Cisco Unified Fabric unifies LAN and storage network to deliver converged solutions.
- F. Cisco Unified Fabric extends virtualization to create pools of shared memory, storage, and computing resources.

Correct Answer: ADE

Unified Data Center architecture diagram

Cisco's Unified Data Center provides a complete architecture platform including products and solutions in three critical areas:

Unified Management The Unified Management component of Cisco's data center architecture features automation, orchestration, and lifecycle management to simplify deployment and operation of physical/bare metal, virtual, and cloud infrastructure. Cisco assists IT departments with developing a self- service portal and service catalog to quickly deliver on-demand IT services to support business initiatives. **Unified Fabric** The Unified Fabric component of Cisco's data center architecture delivers high-performance data and storage networking to simplify deployment, help ensure quality of experience, and reduce operating costs. Cisco's integrated network services provide high-speed connectivity and high- availability, increase application performance, and reduce security risk in multi-tenant environments.

Unified Computing Cisco Unified Computing System (UCS) anchors the Cisco data center architecture with a highly-scalable, system-level computing solution that integrates computing, access networking, and storage networking. Embedded management capabilities simplify operations across physical, virtual, and cloud infrastructure.
