QUESTION 1

HOTSPOT

You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) deployment.

You have two domain users named User1 and User2.

The users will perform the following administrative tasks:

User1 will create device collections.

User2 will create task sequences.

You need to identify to which security role each user must be added. The solution must use the principle of least privilege.

Which security roles should you identify? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Option

User1:	<div style="border: 1px solid black; padding: 5px;"><div style="text-align: right; border-bottom: 1px solid black;">▼</div><div style="padding: 5px;">Application Author Asset Manager Company Resource Access Manager Operations Administrator</div></div>
User2:	<div style="border: 1px solid black; padding: 5px;"><div style="text-align: right; border-bottom: 1px solid black;">▼</div><div style="padding: 5px;">Application Deployment Manager Company Resource Access Manager Operating System Deployment Manager Infrastructure Administrator</div></div>

Correct Answer:

Answer Area

Option

User1:

- Application Author
- Asset Manager
- Company Resource Access Manager
- Operations Administrator

User2:

- Application Deployment Manager
- Company Resource Access Manager
- Operating System Deployment Manager
- Infrastructure Administrator

Box 1: Asset Manager.

Grants permissions to manage the Asset Intelligence Synchronization Point, Asset Intelligence reporting classes, software inventory, hardware inventory, and metering rules.

This role also has the permission to create device collections. Operations Manager can also create task sequences but Asset Manager has least privilege.

Box 2: Operating System Deployment Manager

Grants permissions to create operating system images and deploy them to computers.

Administrative users who are associated with this role can manage operating system installation packages and images, task sequences, drivers, boot images, and state migration settings.

QUESTION 2

DRAG DROP

Your company has two offices named Office1 and Office2.

You plan to deploy a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) Central Administrative site to Office1 and a primary site to Office2.

You need to identify which firewall ports you must allow between Office1 and Office2 for inter-site communication.

Which firewall ports should you identify? To answer, drag the appropriate ports to the correct locations. Each port may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

Ports

80	443	445	1433	4022	8530	8531
----	-----	-----	------	------	------	------

Answer Area

Port to allow file-based replication:

Ports to allow database replication:

Correct Answer:

Ports

80	443				8530	8531
----	-----	--	--	--	------	------

Answer Area

Port to allow file-based replication:

Ports to allow database replication:

*

File-based communication between sites uses the Server Message Block (SMB) protocol by using TCP/IP port 445.

*

To replicate data between sites, Configuration Manager uses its own database replication service. The database replication service uses SQL Server change tracking to monitor the local site database for changes, and then replicates those changes to other sites by using a SQL Server Service Broker. By default, this process uses the TCP/IP port 4022.

*

Intrasite communication between the SQL Server database engine and various Configuration Manager site system roles by default use port TCP 1433.

QUESTION 3

DRAG DROP

You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) standalone primary site.

You use Configuration Manager to deploy software updates to client computers.

You plan to monitor the software update deployment process from a client computer.

You need to collect data as quickly as possible to monitor the software update deployment process.

Which actions should you initiate from the client computer? To answer, drag the appropriate actions to the correct locations. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or

scroll to view content.

Select and Place:

Actions

- Discovery Data Collection Cycle
- Machine Policy Retrieval and Evaluation Cycle
- Software Inventory Cycle
- Software Updates Deployment Evaluation Cycle
- Software Updates Scan Cycle

Answer Area

- First action: Action
- Second action: Software Updates Scan Cycle
- Third action: Action

Correct Answer:

Actions

- Discovery Data Collection Cycle
- Machine Policy Retrieval and Evaluation Cycle
- Software Inventory Cycle
- Software Updates Deployment Evaluation Cycle
- Software Updates Scan Cycle

Answer Area

- First action: Machine Policy Retrieval and Evaluation Cycle
- Second action: Software Updates Scan Cycle
- Third action: Software Updates Deployment Evaluation Cycle

QUESTION 4

DRAG DROP

Your network contains a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) environment.

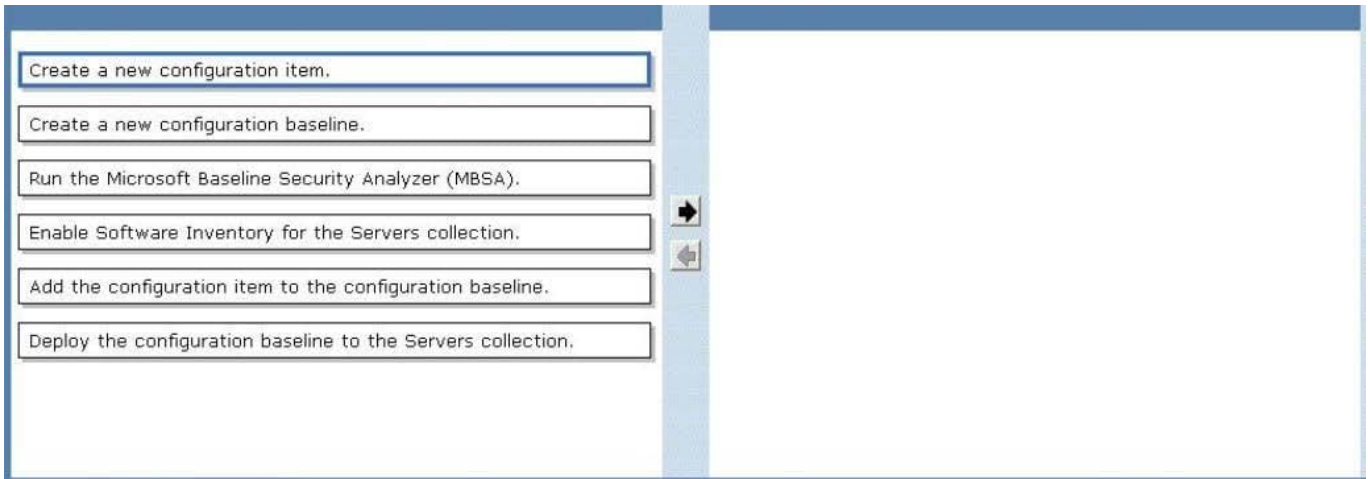

Your company has a security policy that contains mandatory registry settings for all servers.

You have a collection named Servers that contains all of the servers.

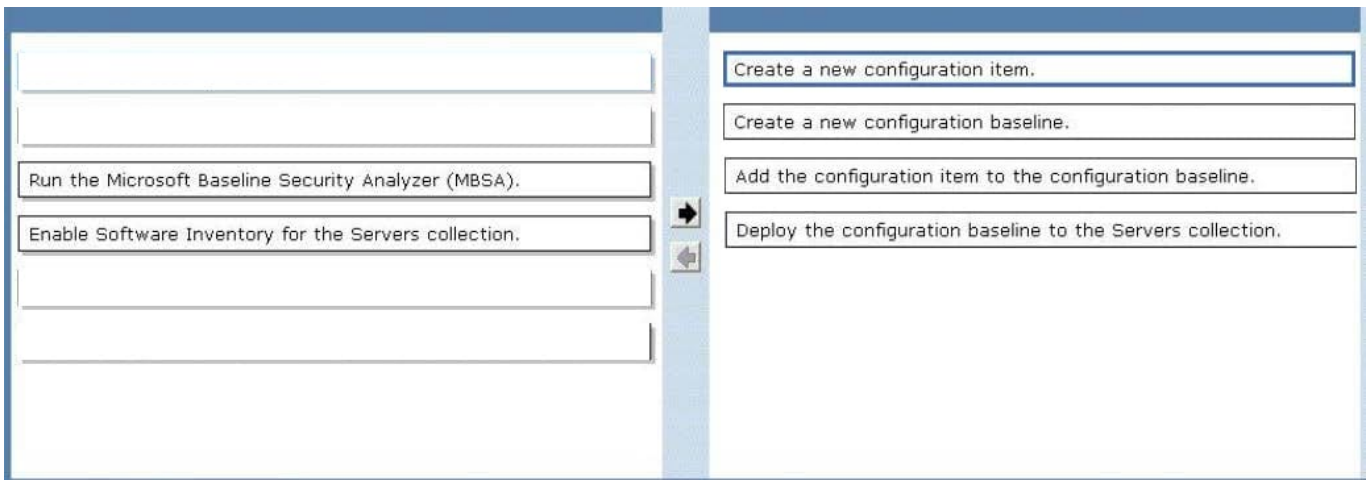

You need to identify which servers do not comply with the security policy.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Correct Answer:

QUESTION 5

HOTSPOT

You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) deployment.

The relevant Configuration Manager client computers are configured as shown in the following table.

Computer name	RAM	Operating system	User
Client1	2 GB	Windows 7	User1
Client2	4 GB	Windows 8.1	User2

You create a user collection named Collection1. You add User1 and User2 to Collection1.

You create an application named App1. App1 has one deployment type and the following requirements:

- <!--[endif] --> Total physical memory: Greater than or equal to 2,000 MB
- Operating system: Windows 7 or Windows 8

You deploy App1 to Collection1 as a required deployment. The deadline is set to the default.

You need to identify which status will appear for the App1 deployment before the users log on to a computer and after the users log on to the computer.

What should you identify? To answer, select the appropriate options in the answer area.
