QUESTION 1

Your company has a private cloud that is managed by using a System Center 2012 infrastructure.

The network contains an Orchestrator infrastructure and a Service Manager infrastructure.

You need to automate user account provisioning for the Self-Service Portal.

The solution must ensure that new user accounts are approved by a member of the human resources department.

You configure the Orchestrator connector.

Which five actions should you perform next?

(To answer, move the appropriate actions from the list of actions to the answer area.)

Select and Place:

Actions	Answer Area
Create a service offering.	
Create a service request template.	
Configure the Active Directory connector.	
From System Center 2012 Configuration Manager, configure the connector.	
Assign a runbook activity.	
Create a request offering.	
Create an incident request template.	
Create a compliance program activity.	
Create a review activity.	

Correct Answer:

Actions		Answer Area
Create a service offering.		Configure the Active Directory connector.
		Assign a runbook activity.
		Create a review activity.
From System Center 2012 Configuration Manager, configure the connector.		Create a service request template.
		Create an incident request template.
		Create a request offering.
Create a compliance program activity.		

QUESTION 2

You deploy a System Center 2012 R2 infrastructure that contains Configuration Manager, Orchestrator, Operations Manager, Service Manager, and Virtual Machine Manager (VMM).

Operations Manager is configured to monitor all servers. Configuration Manger is configured to deploy Windows patches to the servers.

You deploy 10 new web servers by using a VMM service template.

You plan to deploy several hundred patches to the servers.

You need to automate the server patching process without generating alerts.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

A. From VMM, create an update baseline and configure the scope of the update baseline.

B. From Orchestrator, create a scheduled runbook that contains an activity to deploy the updates and to set the maintenance mode.

C. From Configuration Manager, create a software update deployment. From Operations Manager, set the servers to maintenance mode.

D. From Configuration Manager, create an automatic deployment rule.

Correct Answer: B

QUESTION 3

Your company has a private cloud that is managed by using a System Center 2012 infrastructure.

You install the servers shown in the following table.

The company\\'s compliance department identifies the following tasks that must be performed:

Back up individual files from VM1.

Back up the configuration settings of VM1.

Restore the configuration settings of VM1.

Restore individual files from VM1 to an alternate location.

The compliance department administrators recommend installing the DPM agent on Server1, and then performing a full backup.

You need to identify which task is NOT met by the recommended solution.

Which task should you identify?

A.

Restore individual files from VM1 to an alternate location.

B.

Restore the configuration settings of VM1.

C.

Back up the configuration settings of VM1.

D.

Back up individual files from VM1.

Correct Answer: B

In the event of disaster recovery, System Center Data Protection Manager (DPM) 2010 allows you to recover virtual machines as files to a network folder. You can then copy those files to an alternate Hyper-V host server. However, to start a virtual machine on an alternate Hyper-V host server, you have to manually create and configure the virtual machine using the recovered files. DPM 2010 supports alternate location recovery (ALR), which allows you to recover a Hyper-V virtual machine to an alternate stand-alone Hyper-V host or to a cluster. The recovered virtual machine is already registered and configured on an alternate Hyper-V host server.

http://technet.microsoft.com/en-us/library/ff634209.aspx In a virtualized environment the issue is whether to backup from inside the guest or from the host. The latter provides "bare metal restore" of an entire VM where something\\'s gone catastrophically wrong with a VM (or the host) but in general it doesn\\'t provide granular restore of files / folders. DPM 2010 added Item Level Restore (ILR), allowing you to restore individual files or folders within a VM even though it had only been backed up from the host. But this capability was only available when DPM 2010 ran on physical hardware, if the DPM server itself was in a VM this capability was not available. DPM 2012 fixes this glitch and can now do ILR even when the DPM server is a VM. http://4sysops.com/archives/dpm-2012-part-3-other- improvements/

QUESTION 4

Your company has a private cloud that contains a System Center 2012 infrastructure. The network contains a Service

Manager infrastructure and an Orchestrator infrastructure.

You plan to configure the private cloud to meet the following requirements:

Integrate runbooks to Service Manager requests.

Automate administration tasks by using runbooks.

Provide end users with the ability to perform administrative tasks.

You need to configure the private cloud to meet the requirements.

What should you do from Service Manager?

A. Register the Orchestrator Integration Packs.

B. Select the sync folder for the Orchestrator connector.

C. Create an Exception Management Workflow.

D. Register a data source.

Correct Answer: A

QUESTION 5

You need to prepare the environment to support the planned changes for App1.

In which order should you perform the actions? (To answer, move all of the actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Actions	Answer Area
Create a virtual IP (VIP) template.	
Install the provider for the hardware load balancer.	
Copy and modify the App1 service template.	
Create an IP address pool.	
Add a hardware load balancer.	

Correct Answer:

Actions	Answer Area
	Create an IP address pool.
	Install the provider for the hardware load balancer.
	Add a hardware load balancer.
	Create a virtual IP (VIP) template.
	Copy and modify the App1 service template.
