QUESTION 1

You need to recommend a solution to deploy the Hyper-V hosts. The solution must meet the technical requirements.

Which System Center 2012 product should you include in the recommendation? (More than one answer choice may achieve the goal. Select the BEST answer.)

A. Virtual Machine Manager

B. Orchestrator

C. App Controller

D. Configuration Manager

Correct Answer: A

QUESTION 2

You have a deployment of System Center 2012 R2 Virtual Machine Manager (VMM).

You have two virtual machines named Server1 and Server2 that run Windows Server 2012 R2.

You have an application named Appl.

You plan to deploy App1 to Server1 as an Application Virtualization (App-V) package.

You need to install the required components to deploy App1 to Server1.

Which component should you install on each server? To answer, drag the appropriate components to the correct servers. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

Correct Answer:

Components	Answer Area
Application Integration Framework (AIF)	Server1: Server App-V Agent
Monitoring Pack for App-V	Server2: Server App-V Sequencer
VMM agent	

QUESTION 3

You need to identify which component or components of Tier 2 of App1 can be deployed by using Server App-V.

Which component or components should you identify? (Each correct answer presents part of the solution. Choose all that apply.)

A. The Web Server (IIS) server role

B. Web applications

C. Windows services

D. WMI providers

E. Drivers

Correct Answer: BCD

Some of the features supported by Server App-V are the following:

Windows Services: Server App-V includes the possibility to virtualize Windows Services in a different approach than the one we\'ve seenin Desktop App-V. With Server App-V, the service is installed and placed in the OS as a normal

installation of the server application. Thisway we can monitor it as any local service.

Web applications hosted in IIS: We can virtualize web applications entirely (web sites, virtual directories and application pools) on IIS 6,IIS 7 and IIS 7.5. WMI:

Server App-V Sequencer also captures the WMI providers and/or classes created during an installation.

SQL Services Reporting Services: Even though SQL Server engine is not supported for virtualization, the applications that install SQLServices Reporting Services (SSRS) are supported.

COM/DCOM/COM+ objects: These components are registered in the deployment process, this way other applications in the server canaccess them.

Local users and Groups: If the application is creating users and/or groups during the installation, the Server App-V Sequencer captures itand maintains, including SID, for next deployments. Not all applications are supported for use with

Server App-V. Applications such as antivirus software thatrequire device or kernel driver support are not supported. Server App-V is primarily designed for use withbusiness applications or the business tiers of multi-tiered applications.

Consequently some large serverapplications such as Microsoft Exchange Server, Microsoft SQL Server, and Microsoft SharePoint are notsupported. While there is no list of supported applications for use with Server App-V, Server App-V has

beenoptimized to create virtual application packages for applications with the following attributes:

State persisted to local disk

Microsoft Windows Services

Internet Information Services (IIS)

Registry

COM+ / DCOM

Text-based Configuration Files

WMI Providers

Microsoft SQL Server Reporting Services

Local Users and Groups

Scheduled Tasks

Microsoft SQL Server Databases

QUESTION 4

Your network contains an Active Directory domain named contoso.com. The domain contains two member servers named Server1 and Server2 that run Windows Server 2012 R2. Server1 has System Center 2012 R2 Virtual Machine

Manager (VMM) installed. Server2 has the IP Address Management (IPAM) feature installed.

You need to ensure that address spaces created in VMM are visible in IPAM.

What should you do?

A. From Windows PowerShell, run the Add-SCNetworkConnectioncmdlet.

B. From the Virtual Machine Manager console, configure the System Center Settings.

C. From Windows PowerShell, run the Add-SCNetworkServicecmdlet.

D. From the Virtual Machine Manager console, create a service.

Correct Answer: C

Note:

In VMM, network services include gateways, virtual switch extensions, network managers (which include IPAM servers), and top-of-rack (TOR) switches

QUESTION 5

You need to implement the planned deployment of a VMM management server in each data center.

Where should you deploy each VMM management server? (More than one answer choice may achieve the goal. Select the BEST answer.)

A. On the servers in the two-node NLB cluster

B. On the servers in the two-node failover cluster

C. On two independent servers that connect to a hardware load balancer

D. On a highly available virtual machine

Correct Answer: B
