### QUESTION 1

You need to identify which profile type must be used to ensure that Tier 2 of App1 can be deployed as a highly available virtual machine. Which profile type should you identify? (To answer, select the appropriate profile type in the answer area.)

Hot Area:

Correct Answer:

## QUESTION 2

You create a service template for the order management application.

You need to configure the compatibility settings for the application profiles used in the virtual machine templates.

Which compatibility setting should you use for each application profile? To answer, drag the appropriate compatibility settings to the correct application profiles.

Each compatibility setting may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

Compatibility settings	Answer Area
General	Web application: Compatibility setting
SQL Server Application Host	Windows service: Compatibility setting
Web Application Host	

Correct Answer:

Compatibility settings	Answer Area
General	Web application: General
SQL Server Application Host	Windows service: General
Web Application Host	

### QUESTION 3

You need to configure VMM to meet the storage requirements after the planned upgrade of VMM to System Center 2012 R2. What should you add?

- A. Storage providers and storage devices
- B. Logical units and logical switches
- C. Storage providers and logical units
- D. Logical switches and virtual hard disks (VHDs)

Correct Answer: C

### QUESTION 4

You have a System Center 2012 Service Manager infrastructure that contains a single server named SCSM1.

You plan to use a new account named Account1 as the Operational Database Account.

You plan to configure SCSM1 to use Account1 as the logon account for the System Center Data Access Service.

You need to identify which roles must be assigned to Account1.

Which two roles should you identify? (Each correct answer presents part of the solution. Choose two.)

- A. the Service Manager Administrators User Role Profile
- B. the Microsoft SQL Server db\_ddladmin fixed database role
- C. the Service Manager Workflows User Role Profile
- D. the Service Manager Advanced Operators User Role Profile
- E. the Microsoft SQL Server configsvc\_users database role
- F. the Microsoft SQL Server sdk\_users database role

Correct Answer: AF

<http://technet.microsoft.com/en-us/library/hh495527.aspx> suggests that A, E and F are required (Service Manager Administrators User Role Profile, configsvc\_users database role and sdk\_users database role) but the question is asking for

just two answers.

<http://technet.microsoft.com/en-us/library/hh495527.aspx> doesn't mention the configsvc\_users database role as below so the answer is A and F.

System Center Configuration service and System Center Data Access service account:

This account is one set of credentials that is used to update and read information in the operational database. Operations Manager ensures that the credentials used for the System Center Data Access service and System Center

Configuration service account are assigned to the sdk\_user role in the operational database.

---

## QUESTION 5

Your network contains an Active Directory domain. The domain contains two servers named Server1 and Server2. Server1 has System Center 2012 Virtual Machine Manager (VMM) installed. Server2 has System Center 2012 Operations

Manager installed.

You need to configure Operations Manager to monitor the VMM infrastructure.

Which three management packs should you install on Server2? (Each correct answer presents part of the solution. Choose three.)

- A. the Internet Information Services 7 Monitoring Management Pack
- B. the Microsoft SQL Server Monitoring Management Pack
- C. the File Services Management Pack
- D. the Windows Server Hyper-V Management Pack
- E. the Monitoring Pack for Active Directory (AD)
- F. the Windows Server Operating System Management Pack

G. Windows Server DNS 2003/2008/2008 R2 Monitoring Management Pack

Correct Answer: ABF
