QUESTION 1

You need to recommend a patching solution for the VMM infrastructure. The solution must meet the requirements for the planned private cloud infrastructure. What should you recommend? (More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Cluster-Aware Updating (CAU)
- B. A Service Manager workflow
- C. An Orchestrator runbook
- D. VMM update remediation

Correct Answer: D

<http://technet.microsoft.com/en-us/library/gg675088.aspx> Incorrect:

Not A. Cluster-Aware Updating (CAU) requires Windows Server 2012. The servers in this scenario are running Windows Server 2008 R2.

QUESTION 2

You have a deployment of System Center 2012 R2 Virtual Machine Manager (VMM).

You deploy a service by using a service template.

You need to add an additional tier to the service. The solution must minimize the amount of downtime for the service.

What should you do first from the Virtual Machine Manager console?

- A. Create a new version of the service template.
- B. Use the Clone option.
- C. Create a new service template.
- D. Use the Scale Out option.

Correct Answer: A

QUESTION 3

You need to recommend a solution to meet the high-availability requirements for VMM 2012. What should you include in the recommendation?

- A. Install Network Load Balancing (NLB) on Servers.
- B. Split the VMM roles between separate servers.
- C. Store all of the VMM templates in a Distributed File System (DFS) namespace.

D. Install Failover Clustering and Network Load Balancing (NLB) on Server1.

Correct Answer: B

QUESTION 4

Your network contains a server named Srv6 that has System Center 2012 App Controller installed.

You log on to the App Controller portal.

You need to modify the diagnostic logging level.

What should you select from the App Controller portal? To answer, select the appropriate option in the answer area.

Hot Area:

Correct Answer:

Explanation:

<http://technet.microsoft.com/en-us/library/hh546551.aspx> If you are signed in as an Administrator you can also access the logging options by clicking on the icon next to the last refresh time in the toolbar of the Overview page.

Configuring Collection of Diagnostic Information

By default, the client will only record errors and warnings up to 500 entries. You can increase or decrease the amount of diagnostic information recorded, along with how much history is kept, in the logging options window.

To access the logging options, press CTRL+ALT+SHIFT+L. If you are signed in as an Administrator you can also access the logging options by clicking on the icon next to the last refresh time in the toolbar of the Overview page. To increase or

decrease the types of information recorded, check or clear the boxes on this screen.

To increase or decrease the amount of information recorded, specify the number of lines of information to be recorded. Increasing the number of lines will increase the memory used by the client.

Saving and Viewing Diagnostic Information

To save or view the diagnostic information, open the logging options window. To access the logging options, press CTRL+ALT+SHIFT+L.

If you are signed in as an Administrator you can also access the logging options by clicking on the icon next to the last refresh time in the toolbar of the Overview page. On this page you can choose to copy the log to the clipboard or save the

diagnostics to a file. If you copy the diagnostics to the clipboard, you can paste the information into an application such as Notepad to view, or into an e-mail to send to your support engineer.

QUESTION 5

You need to recommend a solution to deploy the Hyper-V hosts. The solution must meet the technical requirements.

Which System Center 2012 product should you include in the recommendation? (More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Virtual Machine Manager
- B. Orchestrator
- C. App Controller
- D. Configuration Manager

Correct Answer: A
