### QUESTION 1

Your network contains a domain named adatum.com. The domain contains five virtualization servers. The servers are configured as shown in the following table.

Server name	Server role
Host1	Windows Server 2008 Service Pack 2 (SP2) Hyper-V server role
Host2	Microsoft Hyper-V Server 2008 R2
Host3	Microsoft Virtual Server 2005 R2
Host4	VMware ESX Server 2.5
Host5	VMware ESX Server 3.5

The network also contains a server named Server1 that runs VMware vCenter Server. In the domain, you install System Center 2012 Virtual Machine Manager (VMM) on a server named VMM1. You configure VMM1 to manage Server1.

You need to ensure that you can add all of the servers to the VMM fabric.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Install Hyper-V Server 2008 R2 Service Pack 1 (SP1) on Host3.
- B. Install Hyper-V Server 2008 R2 Service Pack 1 (SP1) on Host5.
- C. Install Hyper-V Server 2008 R2 Service Pack 1 (SP1) on Host4.
- D. Uninstall VMware vCenter from Server1.
- E. Upgrade Host1 to Hyper-V Server 2008 R2 Service Pack 1 (SP1).
- F. Upgrade Host2 to Hyper-V Server 2008 R2 Service Pack 1 (SP1).

Correct Answer: AC

### QUESTION 2

You need to identify which Microsoft SharePoint product or products support the planned deployment of the System Center 2012 Service Manager Self-Service Portal. Which product or products should you identify? (Each correct answer presents a complete solution. Choose all that apply.)

- A. SharePoint 2010 for Internet Sites Enterprise
- B. SharePoint Foundation 2010
- C. SharePoint Server 2010

D. SharePoint Server 2013

Correct Answer: ABC

One of the following versions of Microsoft SharePoint: Microsoft SharePoint Foundation 2010 Microsoft SharePoint Server 2010 Microsoft SharePoint 2010 for Internet Sites Enterprise SharePoint 2013 is not supported on the server hosting the SharePoint Web Parts. <http://technet.microsoft.com/en-us/library/hh519608.aspx> <http://www.server-log.com/blog/2011/12/29/scsm-2012how-to-install-the-self-service-portal.html>

**QUESTION 3**

You need to implement a solution that meets the resiliency requirements of the customers.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Hyper-V Recovery Manager
- B. Multi-site Failover Clustering with synchronous, block-level storage replication
- C. Multi-site Failover Clustering with asynchronous, block-level storage replication
- D. Hyper-V Replica and Orchestrator runbooks

Correct Answer: B

/ All of the metadata for any of the virtual machines of Customer1 must not be stored in Windows Azure. So we can't use Hyper-V Recovery Manager.

**QUESTION 4**

Your company has a private cloud managed by a System Center 2012 Virtual Machine Manager (VMM) infrastructure.

The server fabric contains three servers named Host1, Host2, and Host3. The servers are configured as shown on the following table.

Server name	Server role	Host group	Connection
Host1	Hyper-V host VMM library	HG1	Fibre Channel
Host2	VMM library	HG2	iSCSI
Host3	Hyper-V host	HG3	Fibre Channel

The networking fabric contains a SAN named STORAGE1. STORAGE1 supports cloning.

You create a SAN copy-capable template named Template1 for a new virtual machine.

Template1 uses a VHD stored on Host2.

You need to ensure that Template1 can be used to provision virtual machines on Host1 and Host3. The solution must

use the minimum amount of administrative effort and must use SAN cloning.

What should you do? (Each correct answer presents part of the solution. Choose two.)

- A. Move Template1 to Host1.
- B. Move Template1 to Host3.
- C. Add Host1 to HG2.
- D. Configure Host2 to use Fibre Channel connection.
- E. Configure Host3 to use an iSCSI connection.
- F. Add Host3 to HG1.

Correct Answer: AF

Put the template on the Library server (host 1).

Add the second host (host3) to the Host group on the library server (host1).

Reference: Rapid Provisioning of Virtual Machines Using SAN Copy Overview URL: <http://technet.microsoft.com/en-us/library/gg610594.aspx>

### QUESTION 5

You need to recommend a storage fabric configuration for VMM. The solution must meet the requirements for the planned private cloud infrastructure.

Which three actions should you recommend performing in sequence? (To answer, move the appropriate three actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Actions	Answer Area
Configure a storage array.	
Install the Microsoft iSCSI Software Target component.	
Allocate a storage pool to a host group.	
Add a storage device.	
Configure the iSCSI initiator.	

Correct Answer:

Actions	Answer Area
Configure a storage array.	Configure the iSCSI initiator.
Install the Microsoft iSCSI Software Target component.	Add a storage device.
	Allocate a storage pool to a host group.

Box 1: Configure the iSCSI initiator on the VMM server to connect to the SAN. Box 2: Add a storage device (using the Add Storage Devices Wizard) to add the SAN as available storage. Box 3: Allocate a storage pool to a host group.
