-  **800,000+** Satisfied Customers

### QUESTION 1

You plan to deploy a SharePoint Server 2013 server farm.

The farm will have two front-end Web servers that are configured as shown in the following table.

Server name	Memory	Processor
WFE1	12 GB	Four physical cores
WFE2	8 GB	One physical core

You need to ensure that pages are rendered by using the front-end Web server that has the smallest health threshold value. Which service should you use?

- A. Request Management
- B. Distributed Cache
- C. Microsoft SharePoint Foundation Subscription Settings Service
- D. Work Management Service

Correct Answer: A

Request Manager is functionality in SharePoint Server 2013 that enables administrators to manage incoming requests and determine how SharePoint Server 2013 routes these requests.

Note: Request routing and prioritizing can be divided into two parts: request-rule matching and front-end web server filtering. Request-rule matching happens exactly like in request routing. Front-end web server filtering uses the health threshold parameter from the throttling rules in combination with front-end web server health data to determine whether the front-end web servers in the selected routing pool can process the given request.

### QUESTION 2

You need to ensure that the web servers can communicate with service applications after you replace the existing farm. What should you do?

- A. Configure Windows Firewall to allow traffic on port 1433.
- B. Configure the network firewalls to allow traffic on port 32843.
- C. Configure Windows Firewall to allow traffic on port 32843.
- D. Configure the network firewalls to allow traffic on port 1433.

Correct Answer: B

### QUESTION 3

A company deploys Enterprise Search for SharePoint Server 2013. The company's Marketing department site is hosted on a local SharePoint farm. The Marketing department launches an anniversary promotional campaign.

After viewing search analytics reports for the campaign, you observe that search users are not being directed to the Marketing site.

You need to direct users to the anniversary promotional campaign pages by moving the result to the top of the search results.

What should you do?

- A. Remove Remote SharePoint sites from the list of available result sources.
- B. Disable Query Rules that do not direct users to the site.
- C. Use a Query Rule to add a Result Block.
- D. Configure properties of the Search Result Web Part to use a Property filter to query content managed properties associated with Marketing.

Correct Answer:

---

#### QUESTION 4

You are managing a SharePoint farm in an Active Directory Domain Services (AD DS) forest.

The forest contains two domains named `americas.contoso.com` and `europa.contoso.com`. A single SharePoint farm is located in the `americas.contoso.com` domain and uses Kerberos authentication.

Users in the `europa.contoso.com` domain cannot access the Excel Services application in the `americas.contoso.com` domain when using an external data source.

You need to ensure that users in the `europa.contoso.com` domain can use the Excel Services application with external data sources.

What should you do?

- A. Deploy a SharePoint farm in the `europa.contoso.com` domain.
- B. Configure Kerberos constrained delegation.
- C. Configure basic Kerberos delegation.
- D. Configure anonymous access in the SharePoint farm.

Correct Answer: A

---

#### QUESTION 5

You provision a Search service application and a User Profile service application for a SharePoint farm.

A company policy requires that an account other than the default content access account must be used for crawling content.

You need to configure permissions to crawl the profile store.

Which User Profile service application object should you configure? (To answer, select the appropriate object in the answer area.)
