QUESTION 1

Your network contains an Active Directory forest. The forest contains a single domain named contoso.com. You have an Exchange Server 2013 organization named Contoso. You plan to create an additional SMTP domain named sales.contoso.com. You will use sales.contoso.com as the primary SMTP address for the users in the sales department.

You create a new email address policy and apply the policy to the sales users.

New sales users report that when they attempt to access their email from the Internet for the first time by using Microsoft Outlook 2010, they fail to connect. The sales users connect to their mailbox internally successfully by using Outlook

2010. All other users can connect to their mailbox from the Internet and internally.

You need to ensure that the new sales users can connect to the Exchange Server 2013 organization by using Outlook Anywhere from the Internet.

Which two actions should you perform? (Each correct answer presents part of the solution.

Choose two.)

- A. Modify each existing Service Connection Point (SCP) object in Active Directory to point to autodiscover.sales.contoso.com.
- B. From DNS Manager, create a host (A) record for autodiscover.sales.contoso.com.
- C. On the Client Access servers, deploy a new certificate that includes the autodiscover.sales.contoso.com name.
- D. Create a new Autodiscover virtual directory on the Client Access servers and configure ExternalURL to use autodiscover.sales.contoso.com.
- E. Create a new Service Connection Point (SCP) object in Active Directory that points to autodiscover.sales.contoso.com.

Correct Answer: BC

QUESTION 2

You have an Exchange Server 2013 organization that contains two servers named EX1 and EX2.

EX1 and EX2 are the members of a database availability group (DAG) named DAG1. DAG1 contains a database named DB1. DB1 is active on EX1.

You deploy a new Exchange Server 2013 server named Ex3.

You add EX3 as a member of DAG1.

You need to add a copy of DB1 to EX3 by using an offline copy of the database.

Which three actions should you perform in sequence? (To answer, move the appropriate three actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Actions	Answer Area
Run the Move-ActiveMailboxDatabase cmdlet.	
Run the Add-MailboxDatabaseCopy cmdlet.	
Manually copy the database files to EX3.	
Dismount DB1 on EX2.	
Run the Update-MailboxDatabaseCopy cmdlet.	

Correct Answer:

Actions	Answer Area
Run the Move-ActiveMailboxDatabase cmdlet.	Dismount DB1 on EX2.
	Manually copy the database files to EX3.
	Run the Add-MailboxDatabaseCopy cmdlet.
Run the Update-MailboxDatabaseCopy cmdlet.	

QUESTION 3

You need to ensure that if a volume fails on EX2 again, a mailbox database copy is recreated automatically on a different volume.

Which command should you run?

- A. Set-MailboxDatabase
- B. Set-MailboxDatabaseCopy
- C. Set-DatabaseAvailabilityGroup
- D. Set-MailboxAutoRcplyConfiguration

Correct Answer: C

Exchange 2013 Auto Reseed Exchange 2013 includes a great new high availability feature that is part of the Database Availability Group. This feature will reseed a database in case of disk failure from a "pool" of volumes that were pre-

configured for this propose. In case that the failed drive contained an active database, Exchange will failover to one of the other passive copies and reseed the database. In case that the failed drive contained one of the passive copies, Exchange will reseed the database on the same drive. AutoReseed reduces the need for Exchange Administrator or any other operator, to be on site at the moment of the drive crash and replace it as soon as he can in order to preserve the healthy copies structure. <http://www.msexchange.org/articles-tutorials/exchange-server-2013/high-availability-recovery/exchange-2013-automatic-reseed.html> <http://blogs.technet.com/b/pfemsgil/archive/2013/04/25/3560621.aspx>

QUESTION 4

In Europe, your company has one main office and five branch offices. In Asia, the company has one main office and five branch offices. Each main office contains a data center.

The network contains an Active Directory forest. The forest contains a single domain named contoso.com. Each office is configured as an Active Directory site.

All client computers are joined to the domain.

You plan to deploy Exchange Server 2013 servers to both data centers.

You need to recommend a client connectivity solution that meets the following requirements:

Users who connect from the Internet must be configured automatically to connect to their mailbox by using Outlook Anywhere.

Users from the branch offices must use Outlook Anywhere to connect to the Client Access servers in their respective region.

What should you include in the recommendation?

- A. A service connection point (SCP) in Active Directory and a host (A) record in the public DNS zone
- B. A service location (SRV) record in the internal DNS zone and a service location (SRV) record in the public DNS zone
- C. A service connection point (SCP) in Active Directory and an inbound port rule for TCP
- D. A service location (SRV) record in the public DNS zone and an inbound port rule for TCP 389

Correct Answer: B

QUESTION 5

You have an Exchange Server 2013 organization that contains a server named EX1. You have a user named User1 in the marketing department.

You need to prevent User1 from submitting more than 50 email messages per minute to the Exchange Server organization by using Microsoft Outlook.

Which three commands should you run?

To answer, move the three appropriate commands from the list of commands to the answer area and arrange them in the correct order.

Select and Place:

Commands	Answer Area
<code>new-workloadpolicy -workloadtype transport 50</code>	
<code>\$b = get-throttlingpolicy limits</code>	
<code>set-mailbox -identity user1 -throttlingpolicy \$b</code>	
<code>set-mailbox -identity user1 -recipientlimits 50</code>	
<code>new-throttlingpolicy limits -messageratelimit 50</code>	
<code>set-transportserver -identity ex1 -maxoutboundconnections \$b</code>	
<code>new-throttlingpolicy limits -recipientratelimit 50</code>	

Correct Answer:

Commands	Answer Area
<code>new-workloadpolicy -workloadtype transport 50</code>	<code>new-throttlingpolicy limits -messageratelimit 50</code>
	<code>\$b = get-throttlingpolicy limits</code>
	<code>set-mailbox -identity user1 -throttlingpolicy \$b</code>
<code>set-mailbox -identity user1 -recipientlimits 50</code>	
<code>set-transportserver -identity ex1 -maxoutboundconnections \$b</code>	
<code>new-throttlingpolicy limits -recipientratelimit 50</code>
