QUESTION 1

You need to ensure that if a volume fails on EX2 again, a mailbox database copy is recreated automatically on a different volume.

Which command should you run?

- A. Set-MailboxDatabase
- B. Set-MailboxDatabaseCopy
- C. Set-DatabaseAvailabilityGroup
- D. Set-MailboxAutoRcplyConfiguration

Correct Answer: C

Exchange 2013 Auto Reseed Exchange 2013 includes a great new high availability feature that is part of the Database Availability Group. This feature will reseed a database in case of disk failure from a "pool" of volumes that were pre-configured for this purpose. In case that the failed drive contained an active database, Exchange will failover to one of the other passive copies and reseed the database. In case that the failed drive contained one of the passive copies, Exchange will reseed the database on the same drive. AutoReseed reduces the need for Exchange Administrator or any other operator, to be on site at the moment of the drive crash and replace it as soon as he can in order to preserve the healthy copies structure. <http://www.msexchange.org/articles-tutorials/exchange-server-2013/high-availability-recovery/exchange-2013-automatic-reseed.html> <http://blogs.technet.com/b/pfemsgil/archive/2013/04/25/3560621.aspx>

QUESTION 2

You need to recommend a solution to resolve the load balancing issue.

Which action or actions should you recommend performing? (Each correct answer presents part of the solution. Choose all that apply.)

- A. From Exchange Management Shell, import a certificate and assign the certificate to the IIS service.
- B. From the settings of the hardware load balancer, enable cookie-based persistence.
- C. From Exchange Admin Center, configure the Exchange Server 2013 virtual directories.
- D. From DNS Manager, create new DNS records in the public DNS zone.
- E. From the settings of the hardware load balancer, disable the source NAT (SNAT).
- F. From EX3, generate a new certificate.

Correct Answer: ACD

<http://blogs.technet.com/b/exchange/archive/2014/03/05/load-balancing-in-exchange-2013.aspx>

NOT B: The hardware load balancer is a Layer 4 device which supports IP-Address affinity, not cookie-based persistence which is a Layer 7 feature.

NOT E: Source NAT (SNAT) is a Layer 7 feature.

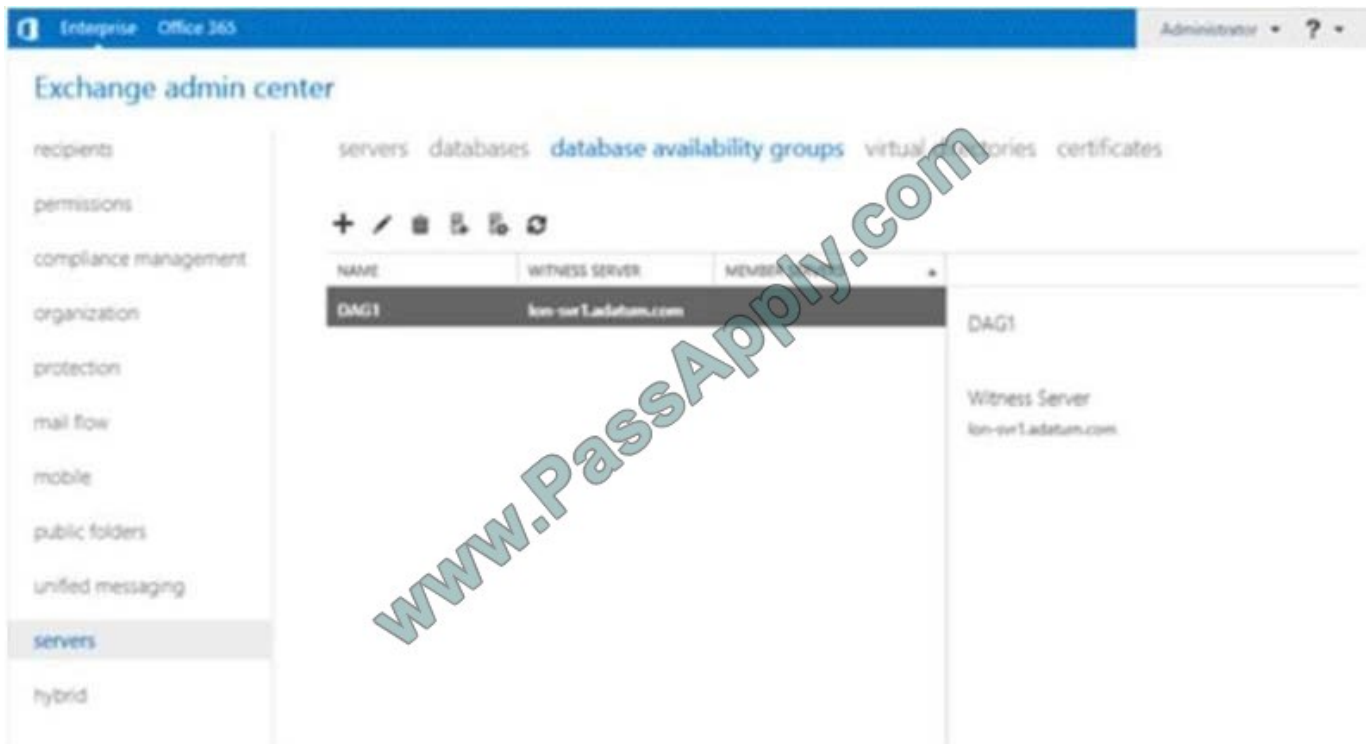

NOT F: A self-signed certificate will not suffice in this instance.

QUESTION 3

You have an Exchange Server 2013 organization that contains two Mailbox servers named EX01 and EX02. Both servers are in the same Active Directory site.

On EX01, you create the first public folder mailbox in a database named DB1.

You view the Exchange Admin Center as shown in the exhibit. (Click the Exhibit button.)

Hot Area:

Answer Area

If the server hosting the active copy of the DB1 database is unavailable, clients will be **[answer choice]**

- unable to access public folders.
- able to access all public folder data.
- able to access cached public folder data.

The public folder hierarchy **[answer choice]**

- only exists on EX01.
- only exists on EX02.
- has replicas on both EX01 and EX02.

Hot Area:

Correct Answer:

Answer Area

If the server hosting the active copy of the DB1 database is unavailable, clients will be [answer choice]

unable to access public folders.
able to access all public folder data.
able to access cached public folder data.

The public folder hierarchy [answer choice]

only exists on EX01.
only exists on EX02.
has replicas on both EX01 and EX02.

QUESTION 4

You have an Exchange Server 2013 organization and a Microsoft Office 365 tenant that are configured for hybrid coexistence. Eight hundred user have mailboxes in the Exchange Server 2013 organization. Six hundred users have mailboxes

in Office 365. You need to implement a mailbox solution for the support department . The solution must meet the following requirements:

All users must be able to send email messages to a dedicated mailbox for support.

All of the users from the support department must be able to log on the dedicated support mailbox and the email messages in the mailbox.

All of the users from the support department must be able to replay to the email messages sent to the dedicated support mailbox.

Hot Area:

Correct Answer:

Shared Mailbox Full Access and Send As

QUESTION 5

You have an Exchange Server 2013 organization named adatum.com. The organization contains five Mailbox servers and two Client Access servers. You need to ensure that an administrator named user1 receives a daily email message that contains a log of all the Exchange Server administrative actions.

Which cmdlet should you use in a scheduled task?

- A. Search-AdminAuditLog
- B. Set-Mailbox
- C. New-AdminAuditLogSearch
- D. Set-ExchangeServer
- E. Set-AdminAuditLogConfig

Correct Answer: C
