QUESTION 1

Your company has a hybrid deployment of Office 365. All mailboxes are hosted on Office 365. All users access their Office 365 mailbox by using a user account that is hosted on-premises. You need to delete a user account and its associated mailbox.

Which tool should you use?

- A. The Remove-MSOLUser cmdlet
- B. The Remove-Mailbox cmdlet
- C. The Office 365 portal
- D. Active Directory Users and Computers

Correct Answer: D

With directory synchronization enabled, the on-premise Active Directory becomes the master for all changes to the synchronized mail-enabled objects in Microsoft Azure Active Directory. You should thus delete accounts from Active Directory and when directory synchronization runs the associated object will be deleted from Azure and the associated mailbox will be soft-deleted.

QUESTION 2

Your company is planning to migrate to Microsoft Exchange Online. The company employs 1,000 people, each with a mailbox currently located on Exchange 2010 on-premises.

You estimate that it will take a minimum of four weeks to migrate all mailboxes from on-premises Exchange to Exchange Online.

The company has the following migration requirements:

During the migration, do not change the existing Microsoft Outlook profiles and .

ost files used by the employees.

Ensure that email messages sent between on-premises mailboxes and online mailboxes during the migration are secure.

Do not send email messages between on-premises mailboxes and online mailboxes over the Internet in plain text.

You need to select the migration strategy that meets the requirements. Which migration strategy should you use?

- A. Cutover migration only
- B. IMAP migration only
- C. Remote move migration only
- D. Staged migration only

Correct Answer: C

QUESTION 3

A company has an Office 365 tenant. You plan to use Office 365 to manage the DNS settings for a custom domain. You purchase the domain through a third-party provider.

You create a custom website. You must host the website through a third-party provider at the IP v6 address 2001:4860:4801:5::4d.

You need to configure the correct DNS settings.

What should you do? To answer, drag the appropriate DNS record to the correct DNS target. Each record may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

Answer Area

	DNS target	DNS record
Name Server	ns1.bdm.microsoftonline.com	
A	ns2.bdm.microsoftonline.com	
AAAA	2001:4860:4801:5::4d	
TXT		
CNAME		
SRV		

Correct Answer:

Answer Area		
	DNS target	DNS record
Name Server	ns1.bdm.microsoftonline.com	Name Server
A	ns2.bdm.microsoftonline.com	Name Server
AAAA	2001:4860:4801:5::4d	AAAA
TXT		
CNAME		
SRV		

Change your domain's name server (NS) records

When you get to the last step of the domains setup wizard in Office 365, you have one task remaining. To setup your domain with Office 365 services, like email, you change your domain's name server (or NS) record at your domain registrar

to point to the Office 365 primary and secondary name servers.

Use (AAAA) DNS record for the website. We must use an (AAAA) and not an (A) record since an IPv6 address is used.

QUESTION 4

Your company uses Microsoft Exchange Online for all mailboxes.

Users report connectivity issues when they attempt to access their mailbox by using Microsoft Outlook 2016.

You need to identify the following:

Whether port 443 is allowed between the corporate network and Office 365
Whether the number of network hops from the corporate network to Office 365 is less than 25
Whether the network latency between the corporate network and Office

365 is less than 275 milliseconds.

Which tool should you use?

- A. Microsoft Connectivity Analyzer Tool
- B. Microsoft Office Outlook Connectivity Tests
- C. Microsoft Support and Recovery Assistant for Office 365
- D. Office 365 health, readiness, and connectivity checks

Correct Answer: B

QUESTION 5

A company has an Office 365 tenant that has an Enterprise E1 subscription.

You use single sign-on for all user accounts. You plan to migrate all services to Office 365.

You need to ensure that all accounts use standard authentication.

Which Windows PowerShell cmdlet should you run?

- A. Set-MsolUser
- B. Redo-MsolProvisionUser
- C. Set-MsolUserLicense
- D. Set-MsolUserPrincipalName
- E. Convert-MsolFederatedUser
- F. Set-MailUser
- G. Set-LinkededUser
- H. New-MsolUser

Correct Answer: E

The Convert-MsolFederatedUser cmdlet is used to update a user in a domain that was recently converted from single sign-on (also known as identity federation) to standard authentication type.
