QUESTION 1

You have a SharePoint Server 2013 server farm. The farm contains the following servers: Six front-end Web servers
Four application servers Four databases servers

All of the databases in the farm are mirrored by using Microsoft SQL Server database mirroring.

The farm contains the following service applications: PerformancePoint Service Application Managed Metadata Service

The PerformancePoint Service Application is configured as shown in the PerformancePoint exhibit. (Click the Exhibit button.)

Edit PerformancePoint Service Application

Specify settings for this service application. You can change these settings later from the Manage Service Applications page.

Name:

Specify a name and default status for this service application.

The setting makes this service application available by default for web applications in this farm to use. Do not check this setting if you wish to specify manually which web applications should use this service application.

Use of the default database server and database name is recommended for most cases. Refer to the administrator's guide for advanced scenarios where specifying database information is required.

Use of Windows authentication is strongly recommended. To use SQL authentication, specify the credentials which will be used to connect to the database.

Failover Server

You can choose to associate a database with a specific failover server that is used in conjunction

PerformancePoint Service Application

Add this service application's proxy to the farm's default proxy list.

SQL Server Failover Clustering must be deployed to provide high availability for the Managed Metadata Service application.	<input type="radio"/>	<input checked="" type="radio"/>

QUESTION 2

You are planning the deployment of a SharePoint Server 2013 server farm.

You plan to deploy Microsoft SQL Server 2012 AlwaysOn Availability Groups. The groups will have four replicas configured as shown in the following table.

Replica name	Replica configuration
SQLReplica1	SQLReplica1 is the primary replica.
SQLReplica2	SQLReplica2 is used for high-availability and is installed in the same data center as SQLReplica1.
SQLReplica3	SQLReplica3 is used for disaster recovery purposes and is installed in a remote location.
SQLReplica4	SQLReplica4 is used for reporting purpose. Failure of this replica must not affect the SharePoint Server 2013 deployment.

You need to recommend which mode of commit must be used for each replica.

Which commit type should you recommend for each replica? (To answer, select the appropriate options in the answer area.)

SQLReplica4:

QUESTION 3

You are managing a SharePoint farm in an Active Directory Domain Services (AD DS) forest.

The forest contains two domains named `americas.contoso.com` and `europa.contoso.com`. A single SharePoint farm is located in the `americas.contoso.com` domain and uses Kerberos authentication.

Users in the `europa.contoso.com` domain cannot access the Excel Services application in the `americas.contoso.com` domain when using an external data source.

You need to ensure that users in the `europa.contoso.com` domain can use the Excel Services application with external data sources.

What should you do?

- A. Deploy a SharePoint farm in the `europa.contoso.com` domain.
- B. Configure Kerberos constrained delegation.
- C. Configure basic Kerberos delegation.
- D. Configure anonymous access in the SharePoint farm.

Correct Answer: A

QUESTION 4

You need to ensure that new users have timely access to user profile information.

On the Service Applications page, which service application should you configure? (To answer, select the appropriate service application in the answer area.)

Hot Area:

- Secure Store Service
- Secure Store Service
- Security Token Service Application
- State Service
- State Service
- Usage and Health data collection
- Usage and Health data collection
- User Profile Service Application
- User Profile Service Application
- Visio Graphics Service
- Visio Graphics Service
- Word Automation Services
- Word Automation Services

Correct Answer:

QUESTION 5

You create a SharePoint site for collaboration with external partners. The network team configures the reverse proxy server and publishes the SharePoint site.

Partners cannot sign in to the SharePoint site.

You need to ensure that partners can access the SharePoint site.

In Central Administration, on which page should you configure the settings? (To answer, select the appropriate page in the answer area.)

Hot Area:
