### QUESTION 1

A company's SharePoint environment contains a single web application with a root site collection that hosts the company intranet site.

The company plans to allow project managers to create project-specific sites and assign permissions for those sites to project team members.

The project sites will contain large files.

You have the following requirements:

Create a separate area of the intranet site for the purpose of containing project sites.

Assign a distinct URL to the project site area.

Ensure that project managers can create project sites and add users to project sites.

Ensure that project site data is stored separately from other intranet site content.

You need to create and configure the project site area.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

The screenshot shows a SharePoint configuration interface. On the left, there is a list of five actions in yellow boxes:

- In the root site for the intranet, enable the setting to use additional content databases.
- In a content database separate from that of the intranet site, create a site collection under the managed path.
- In the root site for the site collection, grant project managers permission to create sites and add users to the sites.
- Create a site at the root of the intranet site.
- In Central Administration, create a managed path for the web application.

On the right, there is an empty box labeled "Answer Area". A large watermark "www.PassApply.com" is overlaid diagonally across the interface.

Correct Answer:

	Answer Area
In the root site for the intranet, enable the setting to use additional content databases.	In Central Administration, create a managed path for the web application.
	In a content database separate from that of the intranet site, create a site collection under the managed path.
	In the root site for the site collection, grant project managers permission to create sites and add users to the sites.
Create a site at the root of the intranet site.	

## QUESTION 2

You need to resolve the SharePoint database error. What should you do?

- A. Add a new request URL mapping to the web application.
- B. Remove the orphaned objects from the database.
- C. Set the databases to read-write.
- D. Add the managed path for the site collection to the web application.

Correct Answer: D

## QUESTION 3

A SharePoint deployment includes the content source described in the following table.

You need to configure the intranet site content source to return search results without impacting availability.

What should you do?

- A. Add an additional index server to the farm.
- B. Reset the search index.
- C. Configure continuous crawling.

- D. Configure an incremental crawl to run every day.
- E. Configure an incremental crawl to run every 30 minutes.
- F. Configure on-demand crawling.

Correct Answer: C

---

#### QUESTION 4

A SharePoint 2010 environment contains a Microsoft SQL Server 2008 R2 database instance named SP-SQL that hosts the databases for the farm.

You are upgrading the farm to SharePoint 2013.

You need to ensure that users can access the unmodified farm contents during the upgrade process.

What should you do?

- A. In SQL Server Management Studio, locate the SQL Server instance containing the content databases and service application databases you plan to upgrade. Set the Instance Read-Only value to True.
- B. Run the following Transact-SQL (T-SQL) statement for each content database and service application you plan to upgrade. ALTER DATABASE SET READ\_ONLY;
- C. Run the following command-line tool for each site collection in the content databases you plan to upgrade. Stsadm -o setsitelock -urKsite collection name> -lock readonly
- D. Sign in to Central Administration in the SharePoint 2010 environment you plan to upgrade. Set each content database and service application database to Read-Only.

Correct Answer: B

---

#### QUESTION 5

You need to implement Office 365 authentication. What should you do?

- A. Create an AD DS domain named proseware.com and join the AD FS servers to the proseware.com domain.
- B. Add a DNS CNAME record for www.proseware.com and point it to www.adatum.com.
- C. Deploy an AD FS proxy for the proseware.com domain.
- D. Add proseware.com as an Office 365 SSO domain and update all user principal names (UPNs) to also use proseware.com.

Correct Answer: D

---
