QUESTION 1

Your network contains an Active Directory domain named adatum.com.

You discover that when users join computers to the domain, the computer accounts are created in the Computers container.

You need to ensure that when users join computers to the domain, the computer accounts are automatically created in an organizational unit (OU) named All_Computers.

What should you do?

- A. From a command prompt, run the redircmp.exe command.
- B. From ADSI Edit, configure the properties of the OU1 object.
- C. From Ldp, configure the properties of the Computers container.
- D. From Windows PowerShell, run the Move-ADObject cmdlet.
- E. From ADSI Edit, configure the properties of the Computers container.

Correct Answer: A

This command redirects the default container for newly created computers to a specified, target organizational unit (OU) so that newly created computer objects are created in the specific target OU instead of in All_Computers. Reference: <http://technet.microsoft.com/en-us/library/cc770619.aspx>

QUESTION 2

Your network contains a production Active Directory forest named contoso.com and a test Active Directory forest named contoso.test. A trust relationship does not exist between the forests.

In the contoso.test domain, you create a backup of a Group Policy object (GPO) named GPO1.

You transfer the backup of GPO1 to a domain controller in the contoso.com domain.

You need to create a GPO in contoso.com based on the settings of GPO1. You must achieve this goal by using the minimum amount of Administrative effort.

What should you do?

- A. From Windows PowerShell, run the Copy-GPO cmdlet and the Restore- GPO cmdlet.
- B. From Windows PowerShell, run the Get-GPO cmdlet and the Copy-GPO cmdlet.
- C. From Group Policy Management, create a new GPO. Right-click the new GPO, and then click Import Settings.
- D. From Group Policy Management, create a new starter GPO. Right-click the new starter GPO, and then click Restore from Backup.

Correct Answer: C

QUESTION 3

You have a server named Server 1 that runs Windows Server 2012 R2. The network has two VLANs named VLAN 10 and VLAN 11.

Server1 has three physical network adapters named NIC1, NIC2, and NIC3.

On Server1, you create a NIC team named Team1 by using NIC1 and NIC2. You configure Team1 to accept network traffic on VLAN 10.

You need to ensure that Server can accept network traffic on VLAN 10 and VLAN 11. The solution must ensure that the network traffic can be received on both VLANs if a network adapter fails.

- A. From Server Manager, change the teaming mode of Team1.
- B. Run the Add-NetLbfoTeamMember Windows PowerShell cmdlet.
- C. From Server Manager, add NIC3 to Team1.
- D. Run the Add-NetLbfoTeamNic Windows PowerShell cmdlet.

Correct Answer: C

QUESTION 4

Your network contains an active directory forest. The forest functional level is Windows server 2012. The forest contains a single domain. The domain contains a member server named Server1 that runs Windows server 2012. You purchase a network scanner named Scanner1 that supports Web Services on Devices (WDS). You need to share the network scanner on Server1.

Which server role should you install on Server1?

- A. Web Server (IIS)
- B. Fax Server
- C. File and Storage Services
- D. Print and Document Services

Correct Answer: D

Print and Document Services enables you to centralize print server and network printer tasks. With this role, you can also receive scanned documents from network scanners and route the documents to a shared network resource, Windows SharePoint Services site, or email addresses. Windows Server 2012 uses Web Services on Devices (WSD) technologies to integrate scanning devices into the system.

QUESTION 5

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1. Server1 runs Windows Server 2012 R2. You need to create 3-TB virtual hard disk (VHD) on Server1.

Which tool should you use?

- A. File Server Resource Manager (FSRM)
- B. New-StoragePool
- C. Diskpart
- D. Share and Storage Management

Correct Answer: C

You can create a VHD from either the Disk Management snap-in or the command line (diskpart). From the DiskPart command-line tool at an elevated command prompt, run the create vdisk command and specify the file (to name the file) and maximum (to set the maximum size in megabytes) parameters. The following code demonstrates how to create a VHD file at C:\vdisks\disk1.vdh with a maximum file size of 16 GB (or 16,000 MB). DiskPart Microsoft DiskPart version 6.1.7100 Copyright (C) 1999-2008 Microsoft Corporation. On computer: WIN7 DISKPART> create vdisk file="C:\vdisks\disk1.vhd" maximum=16000
