QUESTION 1

A company's server administration team would like to take advantage of the newest file systems available with Windows Server 2012 R2. The team needs a file system capable of managing extremely large data drives that can auto-detect data corruption and automatically perform needed repairs without taking a volume offline.

Which file system should the server administration team choose?

- A. NFS
- B. DFS
- C. NTFS
- D. ReFS

Correct Answer: D

The ReFS (Resilient File System) is capable of managing extremely large data drives (1 YB Yottabyte), can auto-detect data corruption, and automatically perform needed repairs without taking the volume offline. Quick Tip: The command `fsutil fsinfo volumeinfo x:` will display the volume file system. ReFS is only intended for data drives and not compatible with all Windows Server 2012 R2 file system technologies, however it is compatible with the new Storage Spaces.

QUESTION 2

Your network contains an active directory forest. The forest functional level is Windows server 2012. The forest contains a single domain. The domain contains a member server named Server1 that runs Windows server 2012. You purchase a network scanner named Scanner1 that supports Web Services on Devices (WDS). You need to share the network scanner on Server1.

Which server role should you install on Server1?

- A. Web Server (IIS)
- B. Fax Server
- C. File and Storage Services
- D. Print and Document Services

Correct Answer: D

Print and Document Services enables you to centralize print server and network printer tasks. With this role, you can also receive scanned documents from network scanners and route the documents to a shared network resource, Windows SharePoint Services site, or email addresses. Windows Server 2012 uses Web Services on Devices (WSD) technologies to integrate scanning devices into the system.

QUESTION 3

A laptop with server 2012 R2 OS, you need to ensure that server 2012 R2 can use wireless network adapter.

What should you do first?

- A. use server manager to install the Wireless Lan Service Role
- B. use server manager to install the Wireless Network Role
- C. use server manager to install the Wireless Lan Service Feature
- D. use server manager to install the Wireless Network Feature

Correct Answer: C

QUESTION 4

How can you manage a newly installed Windows Server 2012 R2 core from another Windows Server 2012 R2 with computer manager? Exhibit:

```
Administrator: C:\Windows\system32\cmd.exe - sconfig

=====
Server Configuration
=====

1> Domain/Workgroup:          Workgroup:  WORKGROUP
2> Computer Name:            WIN-UJ8HPBRUG65
3> Add Local Administrator
4> Configure Remote Management  Enabled
5> Windows Update Settings:    Manual
6> Download and Install Updates
7> Remote Desktop:            Disabled
8> Network Settings
9> Date and Time
10> Help improve the product with CEIP  Not participating
11> Windows Activation
12> Log Off User
13> Restart Server
14> Shut Down Server
15> Exit to Command Line

Enter number to select an option:
```

- A. 1
- B. 2
- C. 4
- D. 8

Correct Answer: A

QUESTION 5

Your network contains an Active Directory forest named contoso.com. All domain controllers currently run Windows Server 2008 R2.

You plan to install a new domain controller named DC4 that runs Windows Server 2012 R2.

The new domain controller will have the following configurations:

Schema master

Global catalog server DNS Server server role Active Directory Certificate Services server role

You need to identify which configurations cannot be fulfilled by using the Active Directory Domain Services Configuration Wizard. Which two configurations should you identify? (Each correct answer presents part of the solution. Choose two.)

- A. Install the DNS Server role.
- B. Enable the global catalog server.
- C. Install the Active Directory Certificate Services role.
- D. Transfer the schema master.

Correct Answer: CD

Installation Wizard will automatically install DNS and allows for the option to set it as a global catalog server. ADCS and schema must be done separately.
