QUESTION 1

You have 30 servers that run Windows Server 2012 R2.

All of the servers are backed up daily by using Windows Azure Backup.

You need to perform an immediate backup of all the servers to Windows Azure Backup.

Which Windows PowerShell cmdlets should you run on each server?

- A. Get-OBPolicy | StartOBBackup
- B. Start-OBRegistration | StartOBBackup
- C. Get-WBPolicy | Start-WBBackup
- D. Get-WBBackupTarget | Start-WBBackup

Correct Answer: A

This example starts a backup job using a policy.

Windows PowerShell PS C:\> Get-OBPolicy | Start-OBBackup

Incorrect Answers:

- B. Registers the current computer to Windows Azure Backup.
- C. Not using Azure
- D. Not using Azure

QUESTION 2

Note: This question is part of series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

Your network contains one Active Directory forest named contoso.com.

The forest contains two child domains and six domain controllers.

The domain controllers are configured as shown in the following table.

https://www.passapply.com/70-412.html 2021 Latest passapply 70-412 PDF and VCE dumps Download

Name	Domain	Site
DC1	Contoso.com	Main office
DC2	Contoso.com	Main office
DC3	Contoso.com	Europe office
DC4	Contoso.com	Asia office
DC5	Sales.contoso.com	Main office
DC6	Manufacturing.contoso.com	Main office

You need ensure that all Active Directory changes are replicated to all of the domain controllers in the forest within 30 minutes. What should you use?

- A. Set-ADSite
- B. Set-ADReplicationSite
- C. Set-ADDomain
- D. Set-ADReplicationSiteLink
- E. Set-ADGroup
- F. Set-ADForest
- G. Netdom

Correct Answer: D

This command gets all the site links in the directory with replication frequency greater than or equal to 60minutes, and then sets the Cost property on these sitelink objects to 200.

QUESTION 3

Your network contains an Active Directory domain named contoso.com. All domain controllers run Windows Server 2012 R2. An organizational unit (OU) named OU1 contains 200 client computers that run Windows 8 Enterprise. A Group

Policy object (GPO) named GPO1 is linked to OU1.

You make a change to GPO1.

You need to force all of the computers in OU1 to refresh their Group Policy settings immediately.

The solution must minimize administrative effort.

Which tool should you use?

A. The Set-AdComputer cmdlet

https://www.passapply.com/70-412.html

2021 Latest passapply 70-412 PDF and VCE dumps Download

- B. Group Policy Object Editor
- C. Active Directory Users and Computers
- D. Group Policy Management Console (GPMC)

Correct Answer: D

In the previous versions of Windows, this was accomplished by having the user run GPUpdate.exe on their computer. Starting with Windows Server 2012 and Windows 8, you can now remotely refresh Group Policy settings for all computers in an OU from one central location through the Group Policy Management Console (GPMC). Or you can use the Invoke-GPUpdate cmdlet to refresh Group Policy for a set of computers, not limited to the OU structure, for example, if the computers are located in the default computers container. Note: Group Policy Management Console (GPMC) is a scriptable Microsoft Management Console (MMC) snap-in, providing a single administrative tool for managing Group Policy across the enterprise. GPMC is the standard tool for managing Group Policy.

Incorrect Answers:

B: Secedit configures and analyzes system security by comparing your current configuration to at least one template.

QUESTION 4

Your network contains an Active Directory domain named adatum.com. The domain contains a file server named Server1 that runs Windows Server 2012 R2.

All client computers run Windows 7.

You need to ensure that user settings are saved to \\Server1\Users\.

What should you do?

- A. From the properties of each user account, configure the User profile settings.
- B. From a Group Policy object (GPO), configure the Folder Redirection settings.
- C. From the properties of each user account, configure the Home folder settings.
- D. From a Group Policy object (GPO), configure the Drive Maps preferences.

Correct Answer: B

User settings and user files are typically stored in the local user profile, under the Users folder. The files in local user profiles can be accessed only from the current computer, which makes it difficult for users who use more than one computer to work with their data and synchronize settings between multiple computers. Two technologies exist to address this problem: Roaming Profiles and Folder Redirection. Folder Redirection lets administrators redirect the path of a folder to a new location. The location can be a folder on the local computer or a directory on a network file share. Users can work with documents on a server as if the documents were based on a local drive. The documents in the folder are available to the user from any computer on the network. Folder Redirection is located under Windows Settings in the console tree when you edit domain-based Group Policy by using the Group Policy Management Console (GPMC).

QUESTION 5

Your company recently deployed a new Active Directory forest named contoso.com. The first domain controller in the forest runs Windows Server 2012 R2.

You need to identify the time-to-live (TTL) value for domain referrals to the NETLOGON and SYSVOL shared folders.

Which tool should you use?

- A. Ultrasound
- B. Replmon
- C. Dfsdiag
- D. Frsutil

Correct Answer: C

DFSDIAG can check your configuration in five different ways:

Checking referral responses (DFSDIAG /TestReferral) Checking domain controller configuration Checking site associations Checking namespace server configuration Checking individual namespace configuration and integrity References: https://blogs.technet.microsoft.com/josebda/2009/07/15/five-ways-to-check-your-dfs-namespaces-dfs-nconfiguration-with-the-dfsdiag-exe-tool/
