### QUESTION 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com. The domain contains three VLANs. The VLANs are configured as shown in the following table.

VLAN ID	Contents
1	Client computers
2	Application servers, Domain controllers, Network Policy Service (NPS) servers
3	Windows Server Update Services (WSUS) server

All client computers run Windows 10.

The corporate security policy states that all of the client computers must have the latest security updates installed.

You need to implement a solution to ensure that the client computers can only connect to VLAN 2 if they have all of the required security updates installed.

Solution: You implement the 802.1x Network Access Protection (NAP) enforcement method.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A

### QUESTION 2

You deploy an Active Directory domain named contoso.com to the network. The domain is configured as an Active Directory-integrated zone. All domain controllers run Windows Server 2012 R2 and are DNS servers.

You plan to deploy a child domain named operations.contoso.com.

You need to recommend changes to the DNS infrastructure to ensure that users in the operations department can access the servers in the contoso.com domain.

What should you include in the recommendation?

- A. A zone delegation for \_msdcs.contoso.com
- B. Changes to the replication scope of contoso.com

- C. Changes to the replication scope of \_msdcs.contoso.com
- D. Changes to the replication scope of operations.contoso.com

Correct Answer: B

**QUESTION 3**

Your network contains an Active Directory forest named contoso.com.

Your company merges with another company that has an Active Directory forest named litwareinc.com.

Each forest has one domain.

You establish a two-way forest trust between the forests.

Server name	Configuration
dc1.contoso.com	<ul style="list-style-type: none"> <li>• Windows Server 2012</li> <li>• Domain controller</li> <li>• DNS server that has an Active-Directory integrated zone for contoso.com</li> </ul>
dc1.litwareinc.com	<ul style="list-style-type: none"> <li>• Windows Server 2012</li> <li>• Domain controller</li> <li>• DNS server that has an Active-Directory integrated zone for litwareinc.com</li> </ul>
server1.contoso.com	<ul style="list-style-type: none"> <li>• Windows Server 2012</li> <li>• Member server</li> </ul>

The network contains three servers. The servers are configured as shown in the following table.

You confirm that the client computers in each forest can resolve the names of the client computers in both forests.

On dc1.litwareinc.com, you create a zone named GlobalNames.

You need to recommend changes in both forests to ensure that the users in both forests can resolve single-label names by using the GlobalNames zone in litwareinc.com.

Which changes should you recommend?

To answer, drag the appropriate configuration to the correct server in the answer area. Each configuration may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view

content.

Select and Place:

**Configurations**

Add a conditional forwarder.

Enable GlobalNames support.

Create an alias (CNAME) record for Server1.

Create a GlobalNames service location (SRV) record.

Answer Area

Server name	Configuration
dc1.contoso.com	Configuration
	Configuration
dc1.litwareinc.com	Configuration

Correct Answer:

**Configurations**

Add a conditional forwarder.

Enable GlobalNames support.

Create an alias (CNAME) record for Server1.

Create a GlobalNames service location (SRV) record.

Answer Area

Server name	Configuration
dc1.contoso.com	Create a GlobalNames service location (SRV) record.
	Enable GlobalNames support.
dc1.litwareinc.com	Enable GlobalNames support.

Deploying a GlobalNames zone The specific steps for deploying a GlobalNames zone can vary somewhat, depending on the AD DS topology of your network. Step 1: Create the GlobalNames zone Step 2(Box 1, box 3) : Enable GlobalNames zone support The GlobalNames zone is not available to provide name resolution until GlobalNames zone support is explicitly enabled by using the following command on every authoritative DNS server in the forest: `dnscmd /config /enableglobalnamesupport 1` Step 3:Replicate the GlobalNames zone Step 4: Populate the GlobalNames zone Step 5 (box 2) : Publish the location of the GlobalNames zone in other forests If you want DNS clients in other forests to use the GlobalNames zone for resolving names, add service location (SRV) resource records to the forest-wide DNS replication partition, using the service name `_globalnames._msdcs` and specifying the FQDN of the DNS server that hosts the GlobalNames zone. Reference: Deploying a GlobalNames Zone <http://technet.microsoft.com/en-us/library/cc731744.aspx>

#### QUESTION 4

Your network contains multiple locations. The physical topology of the network is configured as shown in the exhibit. (Click the Exhibit button.)

You plan to deploy an Active Directory domain named adatum.com. Each location will contain several domain controllers.

You also plan to deploy 500 client computers that run Windows 8 in each location.

You need to recommend a site topology for the planned deployment.

What should you include in the recommendation?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. five sites and three site links
- B. three sites and five site links
- C. three sites and one site link
- D. five sites and five site links.

Correct Answer: A

## QUESTION 5

This question consists of two statements: One is named Assertion and the other is named Reason. Both of these statements may be true: both may be false; or one may be true, while the other may be false.

To answer this question, you must first evaluate whether each statement is true on its own. If both statements are true, then you must evaluate whether the Reason (the second statement) correctly explains the Assertion (the first statement).

You will then select the answer from the list of answer choices that matches your evaluation of the two statements.

Assertion:

You can run the `RENDOM` command on the GIA-DC domain controller to rename the domain.

Reason:

The `RENDOM` command is installed as part of the Active Directory Domain Services role when you promote a server to the domain controller role. The command allows you to rename the domain. Evaluate the Assertion and Reason statements and choose the correct answer option.

- A. Both the Assertion and Reason are true. and the Reason is the correct for the Assertion.
- B. Both the Assertion and Reason are true but the Reason is not the correct for the Assertion.
- C. The Assertion is true, but the Reason is false.
- D. The Assertion is false, but the Reason is true.
- E. Both the Assertion and the Reason are false.

Correct Answer: A
